

Massachusetts Chapter

Chapter Resolution on South Station Expansion.

The Massachusetts Chapter of the Sierra Club is opposed to the expansion of South Station as a stub-end terminal as currently proposed. Completely absent from the present plan is any recognition that building yet more dead-end tracks into South Station is, at best, a temporary solution—a “billion dollar band-aid”—that will be eclipsed, once again, by the anticipated growth in rail passenger traffic.

Instead, MassDOT must revisit its long-shelved plans for a direct rail connection between South and North Stations that will allow for the through running of Amtrak and commuter trains, eliminating the wasteful backup moves that are now a major cause of congestion at both terminals. A first step is to build underground station platforms at South Station as Phase 1 of the North-South Rail Link, thereby accommodating service on Amtrak’s electrified Northeast Corridor while allowing the tracks to be extended north at a later date.

The current proposal, moreover, fails to address the issues of greenhouse gas emissions and climate change, the central challenge of our time. We must make bold moves that had heretofore seemed beyond our means, which would maximize reduction of these emissions while creating more efficient transportation options. According to its DEIR Summary written a decade ago, the Rail Link would result in over 55,000 auto trips diverted daily onto public transportation. An expanded South Station *with* a connection to North Station would be more efficient—and less polluting—than the current plan.
