

“It is time for action. Today is the day to start protecting our children’s tomorrow.”

Stephen H. Schneider (pictured here with his son Adam) is the Melvin and Joan Lane Professor for Interdisciplinary Environmental Studies, Professor of Biological Sciences and a Senior Fellow in the Woods Institute for the Environment at Stanford University, as well as a father of two.

I have spent my professional life on global climate research and can tell you there is still time to curb the most dangerous effects of global warming. But to do so, government, businesses and individuals must work to cut carbon emissions by 80% by the year 2050. It sounds like a big number, but in fact this is achievable with a 2% annual reduction in emissions, starting this year.

There are many things you can do to reduce your carbon emissions on the state and local levels, but also from your home, car and office. The most important thing is to remember why you need to take action. Our children and the world they will inherit are counting on us.
