**FIGHT GLOBAL
WARMING.
BE PART OF THE
2% SOLUTION.**

Scientists say that we can curb the most dangerous effects of global warming if we cut our carbon emissions by 80% by the year 2050. That's an achievable 2% reduction a year.

But that means we must all pitch in — businesses, government, your family and ours. At home, make sure your house is properly insulated. You will save money, reduce waste and cut global warming pollution. It's a little thing, but it all adds up.
