Re: Google Middlefield Park Master Plan

Dear Mayor Ramirez and Council members,

The undersigned environmental organizations are pleased to support Google's Middlefield Park Master Plan (Plan). The Plan realizes the vision of the East Whisman Precise Plan for innovation and sustainability, for increased canopy and native vegetation, and for ecological connectivity and resiliency. We appreciate the effort to transform an area that today consists of parking lots and older office buildings into a mixed-use neighborhood with parks, trees and habitat.

Our organizations have been following the Middlefield Park project since the Plan was submitted to the City of Mountain View in fall 2020. In our September 2021 letter to Council, we supported the project and asked clarifying questions focusing on ecological, mobility and sustainability elements of the plan. Google has since provided answers to our questions, and we expect to engage with Google further in the design phase.

We believe Middlefield Park will align with Mountain View's Biodiversity Strategy and sustainability goals and contribute to the broader ecological and human health of the city and its residents. We appreciate that the Plan has incorporated the following features:

- A focus on site ecology through aggregation of open space areas, creating habitat corridors and using native plant species with high value to birds and pollinators,
- Green spaces include a significant expansion of the existing tree canopy with thought given to planting water-wise and native tree species, expanding on a regional "re-oaking" strategy,
- Plants and green spaces incorporated in public as well as private spaces such as courtyards,
- Consideration of bird-safe design to reduce bird collisions,
- Consideration of light pollution reduction strategies to support human and ecological health, and
- Locating housing and shopping near public transit and prioritizing improvements for pedestrians and bikes to reduce car dependency.

We recommend that the district utility system be included to ensure efficiency and resilience in Phase One, which is entirely residential.

We understand there is a toxic plume under Middlefield Park, and that Google is implementing an EPA-approved plan that establishes management practices for handling contaminated soil, soil vapor, groundwater, or other materials if encountered during construction and thereafter

We respectfully ask Mountain View City Council to approve Google's Middlefield Park Project. We plan to follow the project as it is implemented, delivering a mixed-use project that truly weaves nature into the urban landscape.

Sincerely,

Gita Dev, Co-Chair, Sustainable Land Use Committee
