Shopping for the Earth

Thoughts from the Chair

Jason Frenzel, HVG Executive Committee Chair

I'd like to pause and celebrate the mid-term elections.

As a career environmentalist, I am asked regularly, "what's preventing us from fixing (fill in the blank) environmental problem?". Routinely the answer has been, for my entire life, "we don't have the right people in elected office at the state." This is no longer the case. There has been an immense flurry of conversations amongst the environmental and social activist groups working to identify key priority work over the coming two years. I am excited!

We all know our work is built on the backs of giants. In this case, we should all thank the massive efforts by the voter reform initiatives as well as the women's rights (Proposal 3) advocates. These folks ensured that we have (more) equity in voting and turnout was strong. While not the only reason we won Michigan, it would not be such without their efforts. So thanks!

I also want to celebrate some local wins. Namely 4 millages that passed in Washtenaw County, 3 of which are land acquisition and farmland protection millages. Dexter and Northfield Townships passed new millages and Scio renewed theirs. The 30x30 and 50x50 land preservation goals are as lofty as any we are attempting. But with strong local support we might just get there.

Lastly, and closest to my heart, I'm delighted that the City of Ann Arbor Climate Millage passed. While on City Council, I helped to set the stage for the Office of Sustainability and Innovation. Ensuring that the climate plan has long term funding, with a strong eye on equity, is hands-down my proudest achievement. And again, all of these successes are because of partnerships that spanned outside of the traditional group of environmentalists.

Celebrations are great and we have a right to do so. And now we have much work to do. The presidential elections will come around all too soon. Please reach out if you would like to be involved in HVG's political work!

HVG Executive Committee Election

Executive Committee Election

The Sierra Club is the largest democratically run environmental organization in the world, with direct election of leaders at the national, state and local level each year. The Executive Committee (ExCom) of the Sierra Club Huron Valley Group (HVG) is responsible for the administration and operation of the group (our leadership team comprises numerous non-elected individuals also). HVG members will be electing four ExCom members this fall, for two-year terms beginning in January 2023.

About the Executive Committee

The HVG ExCom consists of 7 people from the HVG membership who are elected to two-year terms by the local membership. They help define rules for the group, administer the group activities, and craft position statements. There are monthly committee meetings, generally on the first Thursday of the month. ExCom members are also required to participate in at least one subcommittees (e.g. Membership, Communications, Conservation, etc.). The time commitment for ExCom participation is roughly 10-12 hours a month.

HVG ExCom Candidates

Kyle Martin

My name is Kyle Martin; I'm an Undergraduate Student at EMU majoring in Environmental Science and double minoring in Biology & Zoology. I'm also Secretary for the newly formed EMU Sierra Club chapter. I am interested in joining the HVG Executive Committee because I want to collaborate with other Michigan natives who are passionate about the environment. In addition, I would like to expand my knowledge of environmental stewardship and sustainability on a more localized level.

Christine Kitchens

I am an experienced lab specialist at the Cooperative Institute for Great Lakes Research who specializes in freshwater hydrogeochemistry and harmful algal bloom ecology. I've also previously worked at the Ann Arbor Downtown Development Authority analyzing data for changes in yearly and monthly trends, and generating the annual State of the Downtown Report. I've volunteered with a number of environmental organizations over the years, including the Huron River Watershed Council, the Matthaei Botanical Garden, and the Detroit Zoological Society.

Dan Ezekiel

HVG members, I ask for your vote to continue on the Huron Valley Group Executive Committee. I'm a lifelong environmentalist, a graduate of the National Outdoor Leadership School (twice) and the U of M School of Natural Resources (now SEAS). I'm also a career science teacher, mostly in the Ann Arbor Public Schools, and I hold a Masters degree in Education Leadership. I helped found Recycle Ann Arbor, led the fight to save the Ann Arbor school district's Environmental Education Program, chaired the city's Greenbelt Commission, and currently serve on the Washtenaw County Parks and Recreation Commission. [cont. on next page]

Jason Frenzel

Hello fellow HVG members. I'm honored by the potential opportunity to serve on the executive committee for another two years, thanks you for taking the time to review all the candidates. For the past 25 years I've worked in the Washtenaw/SE Michigan area creating and supporting environmental initiatives. For my first years out of college, as an AmeriCorps worker, I worked with local farmers to install measures that protect environmental resources. I worked for 10 years at the City of Ann Arbor's Natural Area Preservation, drastically increasing the number of stewardship workdays, Park Stewards, and other volunteer positions. [cont. on next page]

HVG ExCom Candidates

[Dan Ezekiel, cont.]

I've had the honor to chair the Huron Valley Group's Executive Committee since being elected two years ago. My team has reinvigorated the Outings program, which should be the base of any Sierra Club group. We have advocated successfully for ambitious climate initiatives by Ann Arbor, Washtenaw County, and the Ann Arbor school district. Currently we are focused on helping elect an environmentalist President, US Congress, and Michigan legislature. We have moved toward refreshing our group into one that reflects our constituency, especially younger folks and people of color. We recently collaborated with two other Sierra Club groups to present a program about Environmental Justice, and we've held a series of meetings with opinion leaders in eastern Washtenaw County to discuss the ways we can better serve the environmental needs of citizens of color and less-affluent citizens.

I look forward to an Executive Committee that will be 3/7 people of color after this election (up from zero two years ago). We aren't perfect, and we still have much to do and learn. I'll appreciate your support and your feedback. Onward and upward, and let's keep Exploring, Enjoying, and Protecting the planet!

[Jason Frenzel, cont.]

For the past 10 years I've worked at the Huron River Watershed Council. Again, my work has been to increase resident participation in promoting the health of our shared environment, mostly through citizen science.

My volunteer work over the years has included founding and serving on the HomeGrown Food Festival and Local Food Summit, long-time volunteering with the Jim Toy Community Center, and serving as the president of the national association of volunteer managers.

Over the past 4 years on HVG's executive committee, I have served as Treasurer, Secretary, Vice-Chair and now Chair. In these roles I've worked to make the notes and books more transparent and more readily utilized by the leadership team and others. Over the past two years I've helped to create an Eastern Michigan University Sierra Club group.

I look forward, with your support, to increasing all of these initiatives – diversity, community voice, transparency, impact, and team health – over the next two years.

In Memoriam

Part of the
Sierra Club's
mission is to
explore, enjoy,
and protect
the wild
places of the
earth.

John Nystuen

One of the first Michigan Sierra Club members, John Nystuen, 91, died July 2 at the home he shared with his wife Gwen in Ann Arbor. The first Sierra Club meeting in Michigan was held on a cold February evening in 1962 at John and Gwen's Pittsfield Village apartment. Five years later the Mackinac (now Michigan) Chapter was formed. John, a geography professor at the University of Michigan, was an enthusiastic hiker and camper and good at recruiting members, especially students and faculty.

The Sierra Club in its many forms were a happy and fulfilling part of John and Gwen's lives. Over the years John continued his work on local and state issues, contributing to the local natural features inventory and supporting Gwen in amphibian surveys in local ponds. John also contributed his photography and sketching skills to many newsletters and slide shows. He will be greatly missed.

Kathy Guerreso

The Huron Valley Group notes with sadness the passing on July 22nd of Kathy Guerreso, who served for many years as Outings Chair for our group. She led many outings to local parks and nature preserves and introduced many to these local treasures. Kathy was always ready with hikes and enthusiasm for being outdoors. She was always welcoming and brought a happy, friendly voice. We will miss her generosity and her way of encouraging others to explore the nature around us. We will miss her.

Visit Kathy's memorial page to share a memory or send condolences to the family and read the obituary :

https://www.rbfhsaline.com/obituaries/Kathy-Guerreso

Exercise Guide: The Bluffs Nature Area

John Metzler

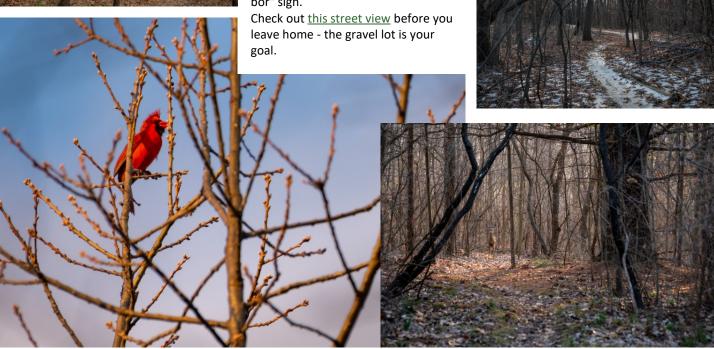

Clockwise from above: Sunrise at The Bluffs, a Cedar waxwing, trails are icy at times, deer are somewhat common, Cardinals are quite common, a view of the Huron River from the south end of The Bluffs

If you get too turned around, use your cell phone and the City has a nice, GPS -compatible <u>site with the trails shown</u>.

Note: the street address is literally painted on a utility pole on the west side of N. Main St., visible only when heading north. The parking lot is just north of the Hawkins Auto Body parking lot. Coming south on Main, the lot is just south of a "Downtown Ann Arbor" sign.

Zero Waste: Trash Talk Tour 2.0

Dan Ezekiel

Photos credit: Dan Ezekiel except as noted.

The second annual Trash Talk Tour took place on Sept. 18, 2022. It was a sparkling late-summer Sunday as Steve Brown and I pedaled 32 miles around town, leading the bike portion of the Tour. Most folks who go on the tour drive it, road rally style, but we wanted to make sure there was a greener transportation option as well.

As we visited such Zero Waste sites as Michigan Stadium, Common Cycle, the brand-newly-refurbished Recycle Ann Arbor Materials Recovery Facility, the City's compost center, operated by WeCare Organics, the old City landfill, and the Kiwanis Sale, it was a great opportunity to see how far we've come and how far we still have to go...

It was the morning after the Wolverines' home victory over Western Connecticut when we toured MIchigan Stadium.

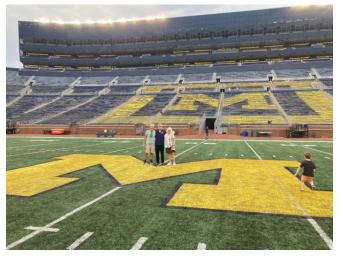

At the Big House, HVG member and U of M employee Anya Dale took us for a walk around the main concourse and the bowl of the stadium itself. She informed us about all the ways the University of Michigan has worked to reduce landfill waste from the stadium and all the ways the waste that is generated is sorted to make sure recyclables and

compostables don't wind up in the landfill. showed us how the CC volunteers fix up We watched hundreds of volunteers from Ann Arbor's Gabriel Richard School as they cleaned up and sorted waste left behind in bike, often to commute to work, but can't the Stadium. Best of all, for a longtime Wolverines fan like me, we got to walk on the field after our tour!

Our next stop was Common Cycle, on W. Huron, where we picked up 15 more cyclists for the next stage of the Tour. Clark McCall, bike recycler extraordinaire

hundreds of donated bikes and re-sell them or donate them to folks who need a afford one. Common Cycle is also open on Sundays to teach people bike repair skills, like mending a flat tire, and how to repair their own bikes. Staff walk customers through these procedures in a wellequipped shop.

Next we pedaled towards Platt Rd., to visit Ann Arbor's new Materials Recovery Facility (MRF), where recyclables from our curbside bins are sorted and sent to markets. Along the way, we stopped to look at the site of the future Veridian Farm, next to County Farm Park, where Matt Grocoff and his Thrive Collaborative are creating a net-carbon-zero housing development, where Zero Waste will be planned into the residents' lifestyle before construction has even begun. Right now, Veridian is just a cleared field, but we look forward to having a tour stop there once

it's up and running, to showcase the Net Zero practices there.

Photo credit: RAA

sick; you will still get paid." The worker was amazed and delighted; they had nev-

er been treated this way at work before. RAA arranges for the workers to receive two meals a day at work, and the workers sometimes ask for extra to bring home to their kids.

RAA staff told us that we are the ambassadors for the new MRF; they estimated 200 folks were given the tour that day. They also asked us to spread the word not to throw things in the

curbcarts that aren't recy-

Arriving at the MRF, we rode over the truck scales at the newly-refurbished and reopened facility, run by our local mission-driven nonprofit recyclers, Recycle Ann Arbor (full disclosure: I helped found RAA over four decades ago).

Inside the MRF, we stared up at a mountain of recyclables, as large and tall as several two or three-story houses. This represented half a day's recycling-truck pickups, from the previous Friday. They keep a backlog so that the workers will have work the next morning, before the collection trucks bring in their first loads from that day.

Many of the workers are returning citizens, recently released from prison, and most have never had a job with benefits before. We were told about a worker who didn't show up one day. The office called the worker's home, and the worker reported they were too sick to come in. The worker was told "You have sick days. You need to call and tell us when you are

clable. That endangers the workers; "If in doubt, keep it out!" we were told. A fine

resource to know what you can put in your curbcart (and what you can't) is here.

Since we were already at the Platt Rd. site, we visited two more places there. First we rode our bikes on a self-guided tour around the Compost Center, where we saw the giant rows of organic waste, like leaves, sticks, and food scraps, being changed into rich-looking, clean-smelling compost, to be returned to local gardens and landscaping projects.

Then we climbed the 75-foot hill of buried trash at the old city landfill, where Fang Wu, of the city staff, showed us where the planned 25-megawatt solar field will be placed, hopefully in 2023, allowing a place where harmful waste was once dumped, mixed in with recyclables and organics that could have been composted, to continue its second act, as a home for threatened grassland bird species like bobolinks, as well as a source for clean renewable energy for Ann Arborites.

Then we headed back to Common Cycle. The time our bike tour had taken caused us to have to skip some stops, like local zero-waste stores By The Pound and BYOC, as well as Maker Works.

The afternoon portion of our bike tour had fewer takers (none, actually), but Steve and I first moseyed over to Eberwhite School, where a delightful pair of students introduced us to the worm-composting pit where they learned to put the scraps from their lunches last year. Bridget Gruber, an A2Zero Ambassador, and Dave Corsa, a retired Eberwhite teacher spearheaded this project, which reduced lunchroom waste by 50% and has continued into this year.

The students had us smell and feel the rich compost the worms produced, and they also played a fun Q & A game with us to test our knowledge of what you can and can't put in the worm pit!

Trash Talk Tour 2.0 con't

Our last stop of the day was at the Kiwanis Sale, on Jackson Rd. There we had the chance to silk-screen re-used t shirts with a Trash Talk Tour logo, see HouseN2Home, a non-profit that takes donated furniture and other household items to help formerly-unhoused folks make their first house or apartment into a true home.

Kathie Wilder and her dozens of volunteer staff at the Kiwanis Sale process an amazing amount and variety of donated items. The sale has been going on in some form for almost 100 years! They have sports and exercise equipment to household furniture, art, office equipment, appliances, toys, and pet supplies. Men's, women's, and children's clothing items, all in good condition. Records, tapes, and CD's, books, and jewelry are some specialties of the Sale.

Sam Mc Mullen, who took over from me as chair of the Tour this year, was there, along with his whole family, all pitching in to make sure Tour participants experienced the "wow factor" of their participation. Samuel's day job is to run the Live Zero Waste Foundation, and he

has brought an incredible amount of energy (and youth!) to the Tour. There were drawings and prizes. Then, at 4 pm, it was time for Steve and me to pedal back to Ann Arbor.

Here are a few reflections I had:

I dreamed up this Tour before the pandemic, when I and other zero-waste advocates felt we were beating our heads against the wall fruitlessly in arguments with City of Ann Arbor staff about the way forward towards zero waste in our community.

Recall that at that time, the city's MRF had been shut down for years over safety issues, with no plans to refurbish it. Our city's recyclables were being sent out of state in diesel semi-trucks to a sorting facility run by a multinational waste company, which I once characterized as a "worst practice" for handling them. The recycling drop-off station on Ellsworth was sliding into dilapidation, again with no plan afoot to refurbish it. City Council had refused to join the regional authority that was then forming to try to streamline our waste-reduction program, and on and depressingly on.

I remembered some other tours that had changed perceptions on environmental issues locally: The Ecology Center's annual Bike-A-Thon, which used to visit many sites, the Ann Arbor Greenbelt Bus Tour, and its predecessor, the Tour de Sprawl. I know Ann Arborites care a lot about zero waste, and I thought if some of them had a chance to visit some of the local sites that are doing something about it, they would form a nucleus of informed, concerned citizens to help advance the zero waste agenda, even when it encountered governmental hostility or apathy.

Fast forward to now: the MRF is up and running again, which among other things, allowed Ypsilanti to resume curbside recycling pickup, the city of Ann Arbor has joined the regional recycling authority, there is a plan underway to repair/replace the Drop-off station. The city, the University, the county and the state are all working hard to decrease landfill contributions. These are important changes, just in the past few years.

But we also have so far to go. Some of it is in the area of individual actions. I'm dismayed each time I go to the grocery store, to see how few customers bring durable bags, instead depending on the giveaway throwaway bags the stores provide. Some of it is in the area of mutual action: Washtenaw County moved in 2016 to place a 10-cent tax on single-use grocery bags, but the state legislature, in its wisdom, pre-empted this tax by banning such moves statewide. Regressive laws like this can only be changed by group action, patient lobbying, educating government representatives, and always VOT-ING for environmentally-committed candidates.

I can't wait to see what changes next year's Trash Talk Tour will highlight! See you there!

TTT 2.0, Fun Facts from Michigan Stadium:

1. The University estimates that 75% of all waste generated within the Big House is either recycled or composted. The U works with all the vendors to reduce the amount of non-recyclable waste and packaging they bring in. For example, those little plastic packets of mustard and ketchup for the thousands of hot dogs served at the games have been totally replaced by refillable condiment stations. It's an educational process that has taken years and, since most of the sales force the vendors use at games consists of an ever-changing army of volunteers, it has to be ongoing.

- 2. Relatively little of the waste the U generates comes from athletic competitions, but the games are considered to be U-M's "front porch," where the public is most often exposed to U-M operations, so the U spends a lot of effort to drive down waste at athletic events. For example, there are no trash cans for landfill-bound waste in the areas of the Stadium that are accessible to customers, just recycling and compost bins.
- 3. About half the waste generated at a football game is left in the stands. The hundreds of volunteers from Gabriel Richard clean this up in a few hours on Sunday morning (before celebrating Mass in the North End Zone!) Recycling, compost, and landfill waste go into color-coded plastic bags and are taken out to waiting trucks. This portion of the waste is almost perfectly sorted. The other half, which customers have deposited in the recycling and compost bins themselves, is much more contaminated. As part of its agreement with WeCare Organics, which accepts the compost, a dozen or more U of M employees are paid to go to the WeCare site on the Monday after home games, to sort contamination out of the compost that customers put in the bins.

TTT 2.0, Fun Facts from the MRF:

- 1. The recyclables are mostly cardboard. One of our tour guides, Bryan Ukena, the CEO of RAA, called that the "Amazon Effect". The composition of recyclables changes with the times; I remember "back in the day" in the 1970's and 80's, the pile would have consisted of more newspaper than anything else.
- 2. RAA faces problems with materials coming in that they can't process. Their number-one issue is plastic bags. Please do not put plastic bags in your recycling curb cart! When they end up on the sorting line at the MRF, they cause big problems, including getting wrapped around the gears, causing the sorting line to have to be stopped, causing down time and wasting resources while the jam is fixed. Many types of plastic bags, like grocery bags, can indeed be recycled, by leaving them at the bins in Kroger, Meijer, Zingerman's, etc., but an even better idea is not to use them in the first place-bring your own bags to the store!
- 3. RAA made it clear how much they value their workers, especially the "pickers" who work in the MRF to hand-sort various materials. These are unionized jobs that pay a thriving wage. One of our tour guides told us "RAA is a Zero Waste organization, and that includes people. We aren't going to get to a circular economy if we treat workers in difficult jobs like these as if they are expendable."

HVG Fall Report

Programs

The Program Committee, with technical wizardry from Oona Woodbury, held four hybrid program meetings in the last five months: Richard Andres welcomed us to HoneyBee U Pick Farm, Suzette Wanninkopf talked about her 8,000 mile bicycle trip, Evan Pratt presented *Climate Change and Rainfall*, and Tajalli Hodge presented *Fed Up with Food Insecurity and So Much More*.

We will continue the hybrid format for some time to come, offering the option of in-person or online attendance.

Book Club

The Book club read *The Bald Eagle: The Improbable Journey of America's Bird* by Jack Davis, *Life's Edge: The Search for What It Means to Be Alive* by Carl Zimmer, and *Our Biggest Experiment: An Epic History of the Climate Crisis* by Alice Bell.

Political Committee

The Political committee held numerous Get Out The Vote letter writing events, writing and mailing over 1,500 letters to low-inclination voters.

Outings

HVG hosted 14 outings in the last five months, including a popular daytime Wednesday Walk series Chris Kosal has created. We also have hosted several successful workdays at various nature areas in our region, including St. Joe Nature Area, Oakwoods Metropark, and Legacy Land Conservancy's Sharon Hills preserve. See our Meetup page for upcoming outings.

When do we meet?

HVG Programs are held on the 3rd Tuesday of the month at 7:30pm.

Book club meetings are held on the 2nd Tuesday of the month at 7:30pm.

HVG Executive Committee meetings are held on the 1st Thursday of the month at 7:00pm.

Outing times and dates vary. Check the MeetUp page for more information. All events, including meetings, are posted there.
