

Rooftop Solar is in Trouble!

We need your help!

The Problem

- Idaho Power is trying to **limit locally-owned solar power** to maximize its own profits.
- This new rate structure would make rooftop solar **less affordable** for Idahoans each year.

The Solution

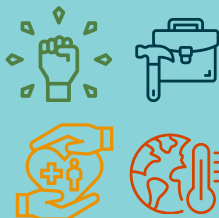

- The PUC should **reject Idaho Power's proposals** and require **fair** rates & fees for local solar owners.
- We should be **expanding access** to solar to equitably address climate change & support local economies.

Idahoans Deserve Equitable Access to Solar Power!

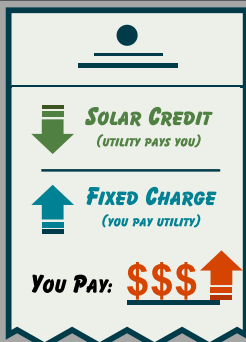

Idahoans have the right to generate their own power to:

- Meet their own energy needs
- Stabilize their energy costs
- Strengthen their energy resilience
- Support their local economy
- Honor their environmental values

Idaho Power should provide fair compensation for your power production.
