Survey Findings: Coloradans' Desire for 100% Clean Energy and Climate Action at Odds with Trump

**Administration's Dirty Energy Agenda** 

According to a new statewide survey conducted by Global Strategy Group, overwhelming majorities of Colorado voters across the political and demographic spectrum believe climate change is a real and serious problem, want action on climate from both the federal and state governments, and are highly supportive of policies that would limit carbon pollution and move the country to clean energy. In fact, more than three quarters of Coloradans support setting a goal of moving the country to 100% clean energy by 2050, and nine-out-of-ten support limiting carbon emission from power plants.

At the same time, Coloradans overwhelmingly reject the Trump administration's approach to energy and the environment. When asked to rate the job performance of the Trump administration on a range of issue, respondents give the administration its lowest marks on climate and the environment. Moreover, large majorities oppose a range of actions the administration has taken on environmental issues, from withdrawing the U.S. from the Paris Agreement, to overturning President Obama's Clean Power Plan, to rolling back limits on mercury emissions.

## **KEY SURVEY FINDINGS:**

Coloradans believe that climate change is happening and is a very serious problem – and they want the state and federal governments to act. More than 8 in 10 Colorado voters (82%) believe that the world's climate is undergoing a change that is causing more extreme weather patterns and a rise in sea levels, and a similar 81% believe that climate change is a serious problem, with more than half rating it very serious (52%). There is cross-partisan agreement with 96% of Democrats, 80% of independents and a remarkable 65% of Republicans rating climate change as a serious problem. Unsurprisingly, then, 84% of Coloradans support the federal and/or state government doing more to reduce the kinds of pollution that causes climate change.

There is strong support for a move towards clean energy and away from fossil fuels. When asked to choose between policies that encourage the US to move away from fossil fuels and towards clean energy or encourage more production of energy from American coal, oil and natural gas (text below), respondents overwhelmingly support moving towards clean energy (69%). This includes 85% of Democrats, 73% of independents, 77% of 18 to 44-year-olds, 71% of Latinx and African Americans and even nearly half of Republicans (47%).

We should implement policies that encourage the U.S. to move away from dirty fossil fuels and towards clean, American energy like wind and solar.

OR

We should implement policies that encourage the production of more energy from American sources like domestic coal, oil and natural gas.

There is overwhelming support for a move to 100% renewable energy on a state and national level. Nearly 8 in 10 Coloradans (79%) support moving Colorado to 100% renewable energy sources for electric utilities by 2045. A further 72% support setting a goal that 100% of energy in America, including energy used to power cars and trucks, come from renewable sources by 2050. The former proposal receives at least two-thirds support from Democrats (97%), independents (74%), and Republicans (66%).

Coloradans want their leaders to support 100% clean energy. Two-thirds of Coloradans (66%) would view an official who supports a transition to 100% clean energy more favorably, versus just 14% who would view them less favorably. As the table below shows, at least pluralities of nearly every group in the survey – including Republicans – would view such officials in a more favorable light.

					Latinx/			
	Total	Dem.	Ind.	Rep.	White	AfrAm	18-44	
More Favorable	66%	89%	64%	45%	65%	75%	79%	
Less Favorable	16%	2%	15%	30%	17%	4%	9%	

**Coloradans overwhelmingly support a range of pro-environmental policies.** By a large margin, Coloradans support policies to require oil and gas companies to reduce methane emissions, limit the amount of emissions from power plants, require higher fuel efficiency, and limit oil and gas production on public lands.

	Support	Oppose	
Requiring oil and gas companies to reduce the amount of methane	87%	13%	
emissions	8770		
Continuing to implement limits on the amount of carbon emissions that	87%	13%	
power plants can release	8770	1370	
Requiring new cars and trucks sold in America to have higher fuel	87%	13%	
efficiency and to produce lower carbon emissions	8770		
Limiting oil and gas production on federal public lands in order to	78%	22%	
protect the habitats of rare and endangered wildlife species	7370		

The Trump administration gets its worst rating on climate and the environment. The Trump administration gets poor ratings on a range of issues, but Coloradans especially disapprove of the administration's handling of the environment (35% approve / 65% disapprove) as well as climate change (36% approve / 64% disapprove) – placing these lowest on a list of seven issues tested.

Coloradans soundly reject the Trump administration's approach to energy and the environment. Respondents were asked to read a neutral description of the administration's actions on energy and the environment (text below), and they were not impressed. More than two-thirds (68%) oppose this approach by the Trump administration while just 32% approve. While a majority of Republicans do approve of this approach, almost every other demographic group strongly disapproves, including Democrats (96% disapprove), independents (72%), 18 – 44-year-olds (72%), and Latinx and African Americans (84%).

When it comes to energy and the environment, Donald Trump and his administration have attempted to boost the production of domestic oil, gas and coal by allowing oil, gas and coal companies to drill or mine in the Arctic National Wildlife Refuge in Alaska and in many national public lands in the continental U.S. They withdrew the United States from the Paris Agreement, an international agreement meant to combat climate change. They have overturned President Obama's rules that limited the amount of carbon emissions from power plants and vehicles, and have reduced government support for renewable energy like wind and solar. They have also rolled back E.P.A. regulations meant to limit air and water pollution, such as methane and mercury emissions.

Coloradans strongly reject the specific environmental actions taken by the Trump administration. While Coloradans reject the Trump administration's overall approach soundly, their opposition to many of the administration's specific actions is even higher. On a range of 11 actions taken by the administration, disapproval ranged from a low of 64% to a high of 83%, with the greatest dissatisfaction reserved for the administration's decision to eliminate methane and carbon emission standards.

	Approve	Disapprove	
Allowing oil and gas companies to release more methane emissions from their	17%	83%	
pipelines and production sites.	1770		
Rolling back air quality standards designed to limit the emission of mercury and	22%	78%	
other hazardous pollutants from power plants.	22/0		
Overturning federal rules that limited the amount of carbon emissions from	25%	75%	
power plants.	23/0		
Rolling back the Clean Water Act and weakening federal rules designed to		80%	
protect millions of acres of wetlands and thousands of miles of streams from	20%		
pollution.			
Eliminating incentives designed to increase the production of renewable energy	25%	75%	
like wind and solar.			
Shrinking the amount of national public lands that are protected from oil and	26%	74%	
gas development as national monuments.	2070		
Eliminating standards that required new cars and trucks to have higher fuel	25%	75%	
efficiency and to produce lower carbon emissions.	2370		
Reducing the enforcement of the Environmental Protection Agency (EPA)	27%	73%	
standards designed to prevent air and water pollution.	27/0		
Opening nearly all of America's coastal waters to offshore oil and gas drilling.	30%	70%	
Opening public lands to drilling by oil and gas companies and mining by coal	29%	71%	
companies.	29%	/ 170	
Withdrawing the United States from the Paris Agreement, an international	36%	64%	
agreement designed to address climate change.	30%	04/0	

## ABOUT THIS POLL

Global Strategy Group conducted an online survey from January 9-22, 2019 with 621 registered voters in Colorado. Care has been taken to ensure that the survey is representative of the registered voter population of Colorado on a variety of demographics including party registration, race, age, gender, education, and region.
