CEQA Documents

The Port of Stockton is committed to environmental stewardship and enhancement of the Delta and surrounding communities. The Port is currently unveiling and implementing a program that identifies opportunities the Port could engage to enhance the Delta. The Delta provides drinking water for two-thirds of the state of California and acts as a habitat for more than 70 fish species and abundant wildlife. The Delta provides a key resting or wintering spot along the Pacific Flyway for migrating bird species. The Port understands the importance of maintaining this delicate environment and providing a habitat for wildlife within an ever-growing population.

The Port of Stockton is committed to improving the region's quality of life by balancing environmental enhancement with the economic benefits of Port activity. This commitment is reflected in the Port's Delta Environmental Enhancement Program which aims to enhance air quality, water quality, and wildlife habitats in the Delta and surrounding communities.
