

Policy on Trapping of Wildlife

Use of body-gripping devices* – including leghold traps, snares, and Conibear® traps – are indiscriminate to age, sex and species and typically result in injury, pain, suffering, and/or death of target and non-target animals.

The Sierra Club considers body-gripping, restraining and killing traps and snares to be ecologically indiscriminate and unnecessarily inhumane and therefore opposes their use. The Sierra Club promotes and supports humane, practical and effective methods of mitigating human-wildlife conflicts and actively discourages the use of inhumane and indiscriminate methods.

Sierra Club recognizes the rights of indigenous peoples under federal laws and treaties granting rights of self-determination and rights to pursue subsistence taking of wildlife.

*Body gripping device – includes, but is not limited to, any snare (neck, body, or leg), kill-type trap (such as the Conibear®), leghold trap (including steel-jaw, padded, offset), and any other device designed to grip a body or body part. This definition includes any device that may result in injury or death because of the mechanism of entrapment. Live cage and box traps, and common rat and mousetraps shall not be considered body-gripping devices.
