

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

**A public meeting is needed so that concerned citizens can let their concerns be known. Responsible decision-making requires public input. Commercial concerns must not be given priority over citizen concerns: citizens have a better sense of long-term impacts, on environment plus quality of life, whereas commercial interests are only interested in what accrues to them in the shorter term, financially and professionally. This is a serious imbalance in decision-making priorities. Citizens MUST be heard.**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Joan Cunningham  
San Antonio, TX 78209

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

**As a Houstonian, I ask you not to add more pollution to the air my children and I breathe.**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Maury Jacob  
Bryan, TX 77801

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

**How many times did your Mom have to tell you to clean up your room till you finally did it? Well, it's past time. Do it now and do it forever - clean up the mess we humans are making of our planet!**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Lisa Johnson  
San Antonio, TX 78240

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

**I agree with this message.**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Sara Wood  
Houston, TX 77095

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

**Make it so.**

**Charles Hill**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Charles C Hill  
Houston, TX 77019

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

**My mother comes from Galveston and our family still owns a house there. I love the Gulf coast. However, it has long suffered under the weight of polluting industry. We should be making efforts to clean-up and restore this wonderful region, not add to its burden. There are plenty of ways to generate clean energy in the area. The coast has lots of wind, tidal energy could be developed, and as we know, Texas has plenty of sun. I don't want to deprive the area of energy, but to move towards a more sustainable way of powering the region so it can recover and thrive.**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Debra Greenberg  
Lewisville, TX 75067

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

**Please host a community public meeting in English and Spanish!**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Dave Cortez  
Austin, TX 78745

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

**Please protect our environment and prevent anything that will further hurt our environment from being anywhere near the Texas coast. I cannot understand why no one seems to care about protecting our beautiful planet.**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. Karen Sterling  
Cedar Creek, TX 78612

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

**Texas produces and exploits the state's resources; Texas needs to clean up the pollution it has made and transition to renewable and cleaner energy sources! NOW!!**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Jan E. Vaughan  
Seguin, TX 78155

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

**Thanks for reading my letter.**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

**This, like numerous other issues (climate change, gun safety, immigration reform, prison reform, education reform, short-term lending regulation, healthcare reform, banking regulation, opioid regulation) remains a vexing problem primarily due to corporations' ability to curry favor with elected officials. The corrupting influence of money in our political system is undermining our democratic traditions and discouraging Americans from voting and/or running for office. This ominous development may well end our experiment in representative democracy unless we alter this decades-long trend. For the sake of the republic, we must amend the US Constitution to state that corporations are not people (and do not have constitutional rights) and money is not speech (and thus can be regulated by state and/or federal campaign finance laws). Short of accomplishing this, no other reform of significance will be achieved.**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Tria Shaffer  
Leander, TX 78641

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

**We have gone far too long relying on fossil fuels for energy production. Besides air pollution, the climate is going wacko and there are major consequences on the ground, right now, costing homeowners, businesses and governments plenty.**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Brian Schill  
San Antonio, TX 78231

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

**We know that fossil fuel extraction and recovery are polluting processes by their nature, with a history of periodic disastrous accidents.**

**The science is undeniable - we must keep oil and gas in the ground. We must shift our investments to building renewable fuel infrastructure, for the sake of our children and grandchildren.**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

**Whenever we burn gas for power in Texas, residents are affected along the entire supply chain, starting the fracking operations in the Permian basin and all along the pipeline routes--harming or endangering the air, the water, the environment, and the health and lives of everyone all along the way --and ending with damage to the air and water and the health of residents where the gas is burned. These are no longer necessary costs to pay for the benefit of having electricity; clean alternatives now exist, and are becoming ever more cost-effective. It is vital to invest in the transition to the clean energy of the future, and not the dirty energy of the past.**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Martin Pesaresi  
San Antonio, TX 78213

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Michael Earney  
Utopia, TX 78884

Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Kelly Epstein  
Spring, TX 77379

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Ray C. Telfair II, Ph.D.  
Whitehouse, TX 75791

Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Crystal Delgado  
El Paso, TX 79902

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Julia Perry  
Tyler, TX 75708

Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Christine Guldi  
Dallas, TX 75248

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Kevin Rolfes  
Austin, TX 78737

Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Nancy Latner  
DALLAS, TX 75230

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Grace Holman  
Childress, TX 79201

Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Ivo Van Der Werff  
Houston, TX 77025

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Stephen Grossman  
Wylie, TX 75098

Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Fred Suhr  
McAllen, TX 78504

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Elizabeth Schaub  
Austin, TX 78705

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Corpus Christi, TX 78413

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Mary Adam  
Bryan, TX 77808

Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Darlene Aksoy  
Coppell, TX 75019

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Rebecca Pollinzi  
Carrollton, TX 75007

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Natasha Tuckett  
College Station, TX 77845

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Marie Sophia Vassilakidis  
Houston, TX 77057

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Joe Van Blargan  
Dallas, TX 75214

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Joyce Dixon  
DALLAS, TX 75219

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Sandra Woodall  
San Antonio, TX 78212

Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

William Forbes  
Nacogdoches, TX 75964

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Spring, TX 77380

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Ron Duke  
Hunt, TX 78024

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Cecil Philip  
LEWISVILLE, TX 75056

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Greg Kay  
Cypress, TX 77433

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Lowell Tacker  
San Antonio, TX 78209

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Sharla Ensle  
Austin, TX 78745

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Jan Beauchamp  
Corsicana, TX 75110

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Harmon Lisnow  
Austin, TX 78737

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Angela Wilkinson  
Universal City, TX 78148

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Gary Graham  
Plantersville, TX 77363

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Joanna And Larry Vaughn  
Austin, TX 78702

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Pamela Vangiessen  
Houston, TX 77009

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Glyn Bailey  
Seabrook, TX 77586

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas' proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

John Bridgest  
San Antonio, TX 78250

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Zach Myones  
Sugar Land, TX 77478

Dear Texas Commission on Environmental Quality,

I am concerned that Entergy Texas's proposed Orange County Advanced Power Station will negatively impact the air that I breathe, and would like to request that TCEQ host a public meeting regarding Entergy's air permit application numbers 166032, GHGPSDTX210, AND PSDTX1598.

**I live Near bad old Texas city's refineries, our state needs to clean up the state, not continue just polluting our way to destroying our country**

According to a 2020 State of the Air report from the American Lung Association, Houston, which is located just downwind of the Orange County plant site, ranked as the 11th most ozone-polluted metropolitan area in the United States -- worse than New York, Chicago, and Dallas-Fort Worth.

This pollution not only causes hazy skies for those visiting in our national parks; it also causes direct harm to individuals in our community in the form of health-related pollution risks. According to analysis by researchers at New York University and the American Thoracic Society, elevated ozone levels in the Houston area cause about 118 premature deaths, 367 emergency room visits, and over 475,000 missed work or school days every year. Furthermore, Orange County's emissions also contribute to ozone nonattainment in Houston, Galveston, and other areas in Texas.

The proposed Orange County Advanced Power Station will be a major source of pollution under the Clean Air Act, emit significant amounts of harmful aqueous ammonia, carbon monoxide, hazardous air pollutants, hydrogen, nitrogen oxides, organic compounds, particulate matter, sulfur dioxide, sulfuric acid mist, and greenhouse gases.

It is my understanding that TCEQ has not made the underlying air permit application readily available to the public, as required by TCEQ regulations. As a result, the public has not had an adequate opportunity to review the proposed project and understand the implications for the community and environment. TCEQ should immediately make the application available to the public and hold a public hearing so that the agency and public can make a transparent and informed decision about approving this major source of pollution.

I ask that TCEQ schedule a public meeting regarding this proposal as quickly as possible, so that people of Bridge City, Texas, and the Houston-Galveston area can make a transparent and informed decision about approving this major source of pollution.

Sincerely,

Mark Daniels  
Galveston, TX 77550
