Resolution on Not Serving Red Meat at Institutionally-Sponsored Functions

Whereas:

- Global climate change is an enormous health threat, both in the United States and worldwide. ¹,²

- Observational epidemiologic studies have found that greater red meat consumption is associated with increases in cardiovascular, cancer, and all-cause mortality.³⁻⁶

- Meat production (particularly that from ruminant animals) is a major contributor to climate change, due to land use changes and the production of carbon dioxide and other greenhouse gases, most notably methane and nitrous oxide.⁷⁻⁹

- Meat production is associated with a variety of other negative environmental consequences including excessive water use, land and water pollution from manure runoff, and excessive antibiotic use.⁷⁻¹⁰

- Consequences of global climate change fall disproportionately on poor people and poor countries, those least responsible for the excess greenhouse gases causing it.¹¹

- As the impact of red meat consumption on health and the environment has become clear, serving red meat at organization-sponsored functions makes a statement that is inconsistent with our mission and values.

Therefore, be it hereby resolved that:

- We commit to not serving red meat at organization-sponsored functions such as conferences, seminars, receptions and dinners.
