Go EV! - Cut your Greenhouse Gas Emissions

Recently the Intergovernmental Panel on Climate Change (IPCC) released the 2022 Sixth Assessment Report. It expresses the urgent need for immediate mitigation to avoid severe effects on the global climate, economy, and us.

The IPCC report, combined with the unfortunate political reluctance of Congress, and state and local governments to act, might make you feel depressed. Don’t go there. Instead, commit to personal actions that make a difference.

How? Let’s start by reducing our personal contribution to the largest source of greenhouse gas emissions (GHG) in the nation: transportation (EPA Data: 28.6%). Over half of that GHG is from passenger cars and trucks. For Arizona, transportation contributes 36.6% of GHG - also #2. Personally, transportation generates more GHG (28%) than any other activity.

The facts explain why reducing your personal transportation GHG is the most important step to mitigate climate change. You could transition to carbon-free transportation by avoiding air travel, carpooling, riding a bike, or most importantly, switching to an electric vehicle.

Electric vehicles (EVs) rock! They are quiet, smooth, relaxing, fast, great for the state economy, less harmful to the environment, and cheap to operate (my EV costs only 1.5 cents/mile and emits only 20% of the GHG compared to my truck). Analysts project that the cumulative net benefits from greater EV use in Arizona could exceed $31 billion state-wide by 2050 and save 160 million metric tons of GHG (that’s huge!). Note that 47% of Arizona’s electric power is carbon-free.

Buying an EV isn’t as easy as it should be. Car dealers are often clueless and prefer to sell gas vehicles. EV owners can be good resources, but you don’t need to overanalyze - just do it!

There are three types of EVs available with lots of details on the internet:

- **Hybrids** (e.g., Prius) are efficient gasoline-powered vehicles equipped with an electric motor and a small battery for regenerative braking. Range and uses, same as gas car.

- **Plug-in Hybrid EVs** (e.g., Volt) are a hybrid with a larger battery that is also charged with utility power. Range: 25-50 miles electric, then same as a gas car. Charging: overnight at home. Best use: local short trips on electric, longer trips on gas.

- **EVs** (e.g., Tesla) are all-electric with a large battery and no gas motor. Range: 100-300+ miles. Charging: hours at home or very fast at commercial recharging stations. Best use: long and short trips.

When flying is unavoidable, you can purchase carbon offsets to compensate for your GHG emissions or select a participating airline. When you purchase a carbon offset, your money is pooled with others to fund a project that reduces GHG – for example capping a landfill to prevent methane leaks. An offset certificate for five tons of GHG costs about $50.

Many different projects are available, but some are much better than others so you need to be careful. For more info, visit: carbonfund.org or cooleffect.org.

You can make a difference: go EV!

Gary is Water Co-Chair, and Chair of the Publications Committee.

Grand Canyon Chapter

Chapter Announcements

APR 7, May 5, June 9 (THU) 6:30 pm Chapter Conservation Committee meetings (virtual). Club leaders meet to consider matters related to statewide conservation efforts, share experiences across groups, and coordinate strategy to align our Chapter mission and goals with our equity values. For more information, please contact sandy.bahr@sierraclub.org.

APR 13, MAY 11, JUN 8 (WED) 6 pm Political Committee meetings (virtual). Help us elect more environmentally-friendly candidates! If you are interested in helping improve the political climate in Arizona, consider being part of our Political Committee! All Sierra Club members are welcome to participate. For information, contact political.chair@grandcanyon.sierraclub.org.

APR 11, MAY 9, JUN 13 (MON) 6 pm. Wildlife Activist Group meetings (virtual). Interested in making a difference for wildlife? Want to help protect habitat, gather important research data on wildlife, or watchdog the Arizona Game and Fish Commission? Please consider joining our Wildlife Activist Group For more information, please contact sandy.bahr@sierraclub.org.

APR 26, MAY 24, JUN 28 (TUE) 6:30 pm Energy and Climate Action Team meetings (virtual). Discussions and programs encompass renewable energy and energy efficiency campaigns nationally and locally. Everyone is invited to participate, no matter how much or how little you know about energy issues. For more information, please contact sandy.bahr@sierraclub.org.

MAY 3 (TUE) 6 pm Publications Committee meeting (virtual). Have an idea? Help plan future issues of Canyon Echo! For more information contact ana.gorla@sierraclub.org.

MAY 1 Copy deadline for Summer 2022 Canyon Echo. Articles, art, photographs, poetry, essays, and brief epiphanies are welcome. Contact Sandy Bahr at sandy.bahr@sierraclub.org.

APR 24 (SUN) 9 am chapter quarterly executive and conservation meeting
Happenings Around AZ

Five groups and one regional conservation committee make up the Grand Canyon Chapter. All events and meetings listed below are open to those interested in learning more about Sierra Club. You can find out more at http://www.sierraclub.org/arizona/events-activities. Schedules are subject to change.

| (x) Group ExCom members |

Palo Verde Group (Phoenix)

Yavapai group programs for the next quarter are:
Wed, Apr 6, 2022; 6:00 PM - 8:00 PM
Wed, May 4th, 2022; 6:00 PM - 8:00 PM
Wed, Jun 1, 2022; 6:00 PM - 8:00 PM

Support Your Local Sierra Club

When you make a donation to the Grand Canyon Chapter, you support Sierra Club’s work in your own backyard. You allow us to continue our efforts to protect wilderness and wildlife, to improve the quality of life in our cities, to curb global climate change, and to promote the enjoyment of nature. If you haven’t already, please also consider signing up to become a monthly, recurring donor to support local Chapter efforts!

Contributions to the Sierra Club are not tax-deductible; they support the Sierra Club’s citizen-based advocacy and lobbying efforts.

Donate online at: http://www.sierraclub.org/arizona/donate or by mail to:
Sierra Club – Grand Canyon Chapter
514 W. Roosevelt St.

Rincon Group (Tucson)
http://sierraclub.org/arizona/rincon

The Grand Canyon Chapter is currently deciding on how to reorganize the Rincon Group or utilize an alternative structure to serve our members in Southern Arizona. In the interim, please contact the chapter office at grand.canyon.chapter@sierraclub.org or (602) 253-8633 for questions on events and issues.

Saguaro Group (North Maricopa County)

What Climate Crisis Mitigation Measures Are Promised by Your Local Authority?

Focus on Valley Metro

By Toni Malcolm

In his blog “Inside the Ride” dated August 8, 2021, Mark Carlson, Rail Operations Communications specialist for Valley Metro, mentions the following statistics regarding the organization’s contribution towards reducing carbon emissions.

If Valley Metro did not exist, an additional 182,000 tons of carbon dioxide could have been discharged in 2020.

Thirty million gallons of gas were saved in 2020 by people using mass transit.

Some greenhouse gas emissions are generated from fuels that run the Valley Metro road transportation fleet and in the generation of the electricity to run the light rail. As far as possible, alternative fuels are used, and technology is becoming increasingly efficient, resulting in a decrease in the generation of greenhouse gasses.

“Even with lower than usual ridership in 2020, Valley Metro was still able to offset more greenhouse gasses than we produced,” said Mackenzie McGuffie, Valley Metro’s Sustainability Coordinator.

Focus on City of Mesa

By Toni Malcolm

On February 15, 2022, Mesa Mayor John Giles gave his State of the City 2022 address.

In relation to the Mesa Climate Action Plan adopted in 2021, Mayor Giles mentioned the following about transportation and a reduction in its carbon footprint:

The city received the second largest transit planning grant in the US to plan a five-mile streetcar route from Riverview, through the Asian District and Fiesta District, to downtown Mesa. This will connect the Cubs spring training facility with the light rail, offering a good alternative to single-family vehicles as a mode of transportation to the spring training events. It will also offer connectivity to valley transit buses and the light rail, to the Asian District, the Fiesta District and downtown Mesa. These business districts offer a variety of locally-owned eateries and specialty shops.

The city has adopted the use of electrical vehicles as a large part of its response to climate change. Mesa has purchased the first fully electric Fire Truck in the US. It has also pledged that over the next 10 years it will replace its entire fleet of trucks with electric ones.

ElectricaMecannica already has several retail outlets in the US, four of which are here in the valley. It is opening its first manufacturing facility in the US in Mesa. Here it will manufacture its flagship electrical vehicle, the Solo. This facility is slated to open summer 2022. For more information on the facility please click here.

The city has partnered with ASU to research the use of wastewater in the creation of micro-algae, the oils from which, amongst other uses, can create biodiesel.

For other exciting innovations and happenings in Mesa and to see Mayor Giles ride into the Mesa Convention Center hall in a Solo click here.

Toni Malcolm is the guest editor for this edition of the Canyon Echo

Centering Equity: the City of Tucson Leads on Climate Action  
By Oscar Medina

The City of Tucson’s leadership, Mayor Regina Romero, and council members have once again affirmed their commitment to acting on climate. At the last mayor and council meeting on Feb. 23, an update of the climate action and adaptation plan was provided.

Tucson’s commitment to building a Climate Action Plan started at a mayor and council retreat in Dec. of 2019. With Mayor Romero elected to lead the city and progressive leaders like Lane Santa Cruz joining the council, a shift in leadership and vision was bound to happen. In the early months of 2020, Mayor Romero joined a national network and coalition called Climate Mayors. She hired a Climate and Sustainability Advisor and advocated for a local ordinance that would fund green stormwater infrastructure, today called Storm to Shade, a holistic plan to capture stormwater to prevent flooding and improve the overall green canopy of the city.

As part of the Mayor’s campaign platform, an early commitment to reducing the urban heat island effect came with the launching of the Tucson Million Tree (TMT) initiative, a plan that has already resulted in the planting or distribution of close to 40,000 trees. In September of 2020, a Climate Emergency Declaration was passed by the mayor and council, establishing concrete goals of carbon neutrality by 2050 and centering on frontline communities (low-income and people of color). Most importantly, the community survey, listening sessions, and planning are prioritizing frontline communities that are most impacted by climate change. In the spring of 2021, I had the privilege of watching a community listening session in Spanish at Las Milpitas Community Farm. These listening sessions are only one way that historically marginalized communities have been invited to the dialogue.

In addition, the electrical vehicle readiness roadmap was adopted in February of this year and its implementation is underway, including the creation of a vehicle fleet transition plan, the launching of five electric transit buses, and the adoption of EV ready code amendments for all new residential developments, with multi-family and commercial new buildings in process. The renaming of the landfill in the south side of Tucson to Los Reales Sustainability Campus, reaffirms the city's commitment to zero waste by 2050.

In order to center equity, an investment to hire a climate action consulting firm was made to complete the climate action and adaptation plan by December of this year. In the next few months, our city will see the culmination of an equity forward and community engagement approach consisting of stakeholder workshops, community dialogues, pop-up events, and climate action promotoras, all of which will shape the final Climate Action and Adaptation Plan. Finally, this holistic plan will for once strategically invest time and resources that will engage Black, Indigenous, and People of Color (BIPOC) perspectives that will shape the future decisions that will lead toward a just, sustainable, and equitable future as we build climate-resilient communities.

For more information, visit the City of Tucson Climate Action Hub.

Light Pollution Disrupts the Cycle of Life  
By Gail S. Abend

Dark skies filled with stars, and the band of the Milky Way is a joy and was the normal condition before our species started lighting up the night sky. It started slowly with campfires, then gas lamps, then electric lights followed by tall towers glowing at night. I’ve had the good fortune to work at our dark sky national parks. There were so many stars, finding familiar constellations was a challenge.

Light pollution is as damaging to our planet as air and water pollution. The stars and planets hold deep meaning for Native Americans and other Indigenous cultures worldwide. Dark skies are the source of origin stories, the home of ancestors; the stars are the library and universities for various cultures past and present. And our fellow life forms on the planet require dark skies to conduct the business of survival. Light pollution disrupts the lives of animals on land, sea, and air.

Nocturnal animals depend on the dark of night to hunt their prey or to avoid predators. Artificial light in urban and suburban areas has created skyglow, (the brightening of the night sky over inhabited areas), permanently turning night into day. The nighttime croaking of frogs and toads may become memories as artificial light disrupts their mating chorus and eventually their reproduction.

Have you ever seen the march of the baby sea turtles to the sea? It’s a bittersweet event as many become prey to seabirds; we cheer when one makes it to the sea. Hurray, she has a chance. Yet artificial light affects the reproduction of sea turtles. The turtles hatch at night on the beach. The babies instinctively turn to the bright horizon over the ocean. It has been this way for millions of years. Artificial light draws them away from the ocean. Millions of hatchlings die this way every year.

Migrating birds navigate by the moon and stars; artificial light takes them off course and they crash into glass towers aglow with lights that persist long after their occupants have left for the day. You’ve seen moths gathering around your porch light. Predators take advantage of insects attracted to artificial light. Light pollution is contributing to the decline of insects which we know are important pollinators and a link in the food web.

Light pollution disrupts the cycle of life.

We can do something about it:
- Support dark sky ordinances
- Use warm colored LED bulbs, dimmers & motion sensors

See more at: https://www.darksky.org/light-pollution

Gail is an active member of our wildlife group
In 2017, Chispa Arizona, a community organizing program of the League of Conservation Voters, launched the Arizona Clean Buses for Healthy Niños campaign to advocate for healthier communities and lobby to bring electric school buses to our state.

It took years of organizing by Chispa Arizona and community members to make this happen. Phoenix Union High School District students (PUHSD) relentlessly advocated for electric buses with their school board for an entire year. Cartwright School District students’ moms convinced their school board to invest in electric buses and then organized to pass a $60 million bond that would partly be used to purchase an electric bus for the district.

In April 2019, the PUHSD Governing Board voted to invest in an electric bus pilot program and purchase the first electric school bus in the state. In January 2020, community members welcomed the first electric school bus in Arizona’s history. In the summer of 2021, Cartwright Elementary School District became home of the largest electric school bus in the state.

Now, what started as a push for equity in the community by bringing electric school buses, has grown into a broader vision for clean transportation in the state with Chispa Arizona’s Clean and Green Campaign. One of the goals of the campaign is to improve Maricopa County’s air quality through 100% free and electric public transportation by 2035.

The project, in part, intends to secure funds that prioritize the investments needed for the electrification of public transit and a more equitable infrastructure that can be accessible to all community members. This includes bus lots with charging equipment, accessible, affordable and sufficient charging stations for individual cars, and other elements necessary for a more general transition to electric vehicles to be viable for the community.

“Money is going to be invested towards transit in our region through an extension of Proposition 400, a half-cent sales tax, which voters will see on their ballots this fall and vote to potentially extend. Revenue from the extension will shape our region’s development for the next 25 years,” says Sawsan Abdurrahman, Chispa Arizona’s Clean & Green Campaign Manager. “With Maricopa County being severely impacted by poor air quality and extreme heat, we must prioritize investing this revenue in electric vehicles and infrastructure, not more highways, which will worsen our air quality and urban heat island.”

Chispa Arizona plans to achieve the Clean and Green campaign goals by building relationships with decision makers to ensure community voices are represented in policy; community organizations to ensure strong partnerships; and the public to ensure community needs are centered. The organization will also engage in an awareness and education effort through social media and events, and by collecting and showcasing the stories of community members who rely on the public transportation system.

Chispa Arizona will launch the Clean and Green campaign on April 23, during its celebration of Earth Day. Those interested in getting involved with these efforts can visit chispaaz.org for more information or follow them on social media.

Nuvia is Deputy Communications Director for Chispa Arizona
Hiking Guidelines

The Sierra Club is a nationwide organization with active local outings for members and non-members. Please join us as we make friends and explore life-enriching interests. Simply find an outing by date and contact the leader for directions, reservations, time, and additional information. RESTRICTIONS: NO FIREARMS, RADIOS, OR PETS (unless noted otherwise). Outings are by reservation. Call early (group limit 20).

Each hike is rated for degree of difficulty and risk by the leader. 
“A” >16 miles or >3,000 ft. elevation change (EC) “D” <3 miles and 500 ft. EC  
“B” 8-16 miles and 1,500-3,000 ft. EC  RT Round Trip  
“C” 3-8 miles, 500-1,500 ft. EC  OW One Way

The trip leader has absolute authority to question trip participants as to their equipment, conditioning, and experience before and during the trip. All participants on Sierra Club outings are required to sign a standard liability waiver. If you would like to read the liability waiver before you choose to participate in an outing, please go to http://content.sierraclub.org/outings/local-outdoors/resources or contact the National Outings Dept. at 415-977-5528 for a printed version. Sierra Club liability covers leaders only. Each person is responsible for his/her own first aid equipment. If you are injured, notify the leader immediately. If you leave the trip, with or without the leader’s permission, you are considered to be on your own until you rejoin the group. Hikers are encouraged to carpool and share the driver’s fuel expense. Donations are accepted from all participants at $1 (member) and $3 (nonmember). Money is collected by the leader and deposited with the group treasurer. For more information, contact the Sierra Club Grand Canyon office at 602-253-8633. Hikes and outings are also listed online at https://www.sierraclub.org/arizona/events-activities. CST 208766-40. Registration as a seller of travel does not constitute approval by the State of California.

Requirements for 2022 Spring Outings

Sierra Club Grand Canyon Chapter Outings are happy to be back on the trails! We look forward to seeing you and encourage you to recommend Sierra Club Outings to your friends, family, associates, and others. Some new rules are outlined below.

- If you are experiencing possible COVID symptoms or are sick, you should not be attending the outing.
- You are responsible for contacting the Outings leader to report a positive COVID test.
- Group sizes may be limited for safety and to allow for social distancing.
- Masks are optional for adults outdoors.
- Unvaccinated minors must wear a mask.
- Masks are required for indoor close quarters such as vehicles, restaurants, visitor centers, etc. regardless of local mandates or vaccination status.
- In close quarters such as vehicles, it is recommended that you open windows for ventilation when possible.
- You are welcome to wear a mask outdoors if it makes you more comfortable.
- No vaccine or tests are required for day events.
- You will not be identified as to your vaccine status and cannot be turned away if you are not vaccinated.
- Vaccination is required for multi-day trips that involve staying overnight indoors.
- Exemptions are allowed with a negative PCR test 72 hours before trip departure.
- A Medical Form is not required for front country outings.
- A Medical Form is required for the back country for leader review and is confidential.

Explore and Enjoy Arizona

APR 9 (SAT) “B” Center Mountain Dayhike This outing will take place in the Sierra Ancha Wilderness Area. This outing will also take place on lands formerly occupied by the Hohokam Culture, and following that, by other Native American entities. The land was formally ceded to the United States after Mexico’s defeat in the Mexican-American War in 1848. This outing will be about 7 miles in length RT with an elevation gain of about 1,800 feet. The leader will discuss fire ecology and the wilderness history of this area. Excellent riparian scenery will be found on this trail as well as great views of Reynolds Creek Canyon. Plan on having dinner in Miami at the conclusion of the trip.

For reservations, meeting time and place contact your leader Jim Vaaler at jimvaaler@msn.com or call Jim at (602) 553-8208.
SunZia is BACK.....from bad to worse

A study conducted by the Environmental Protection Agency in 2012 found that the San Pedro Valley has the highest index of biodiversity in the Southwestern states of Arizona, New Mexico, Nevada, Utah, and Colorado. The current trajectory of transmission lines planned by SunZia directly impacts this area. Currently, over a third of the San Pedro Watershed is under protective status, which should mandate no further intrusion. In 2016, despite the objections of many Arizonans, the Arizona Corporation Commission (ACC) approved two 500-kilovolt lines to transfer wind energy from eastern New Mexico through Arizona to customers in Phoenix and California. The argument was that this would facilitate renewable energy. The question was whether this project was an appropriate one. The vote was not unanimous. The chairman, in his dissent, spoke about a possible reduction of natural values in the San Pedro River Valley, and several provisions were included to minimize, as much as possible, the damage to the wildlife in the valley.

The intervening years have seen a lot of activity on the proposal, mainly in New Mexico since the White Sands Missile Range is near the route. There will be a second Environmental Impact Statement (EIS), which is expected to be out in April. This time, to gain further distances from White Sands, the plan is to severely disrupt not one but two National Wildlife Refuges related to the Rio Grande. Unfortunately, the new plan brings changes for Arizona too.

The San Pedro Valley’s status as an important bird flyway is threatened. Years ago it was declared to be of international significance. It remains a primary conduit for bird migration in the West. The transmission towers and lines (an average of 135 ft tall) would pose a danger to birds. Neotropical birds that are nesting need to forage at night, and that would take them from the river bottom up past the power lines. The valley is also important for non-avian wildlife. At this point, the San Pedro region is the second largest unfragmented area in the state, second only to the Grand Canyon area. The EIS proposes about 700 miles of new roads along the SunZia’s proposed corridor, some directly fragmenting the San Pedro region.

When the ACC approved the project, it was in conjunction with a Plan of Development that specified minimizing new roads, and setting up an eight-mile portion of the lines employing aerial construction for the setting of transmission structures and conductors. It appears that this requirement may not be taken seriously as there is all kinds of evidence that road access to this eight-mile stretch from a rural dirt road through the valley is being planned—access routes and property are being obtained by SunZia.

Moving EV Bills at the Arizona Capitol

Four bills that would promote the use of electric vehicles are pending in the state legislature. Three of those bills are sponsored by Arizona State Sen. Victoria Steele and one by Arizona State Rep. Paul Boyer.

These bills have bipartisan support. Steele is a Democrat in Legislative District 9 in Tucson; Boyer is a Republican in Legislative District 20 in Phoenix.

Sen. Steele said she was motivated to support these bills after she was asked by young climate activist Kyle Kline what she was doing about climate change. She told Kline that she is in the minority party and unable to move climate change legislation.

That was unacceptable to Kline. Sen. Steele didn’t know if she could get anything accomplished, but gathered her staff to ask what was the biggest climate issue, how they should tackle it and what’s stopping them.

“These bills have failed several times before and we don’t know if we’ll see the finish line, but excuses will never get us there,” she said.

Steele said she has been able to get Electric Vehicles to move by building trusting relationships with other legislators.

“That takes time, but I’ve found that when I look for the best in another person I can usually find it and connect with them at those points. We can usually get some important work done together,” she said.

House Bill 1151, titled as the Charging Station Pilot Program, would establish more charging stations throughout Arizona for electric vehicles. The program would be administered by the Arizona Department of Education and other state agencies for state buildings.

The bill, as originally proposed, would have provided $500,000 in state funds; those funds were eliminated from the bill and the funding would have to come from the federal government.

If no federal funding was supplied then the program would be repealed in 18 months.

The bill was heard by the Senate Transportation and Technology Committee as well as the Appropriations Committee. It is scheduled to be heard on the Senate floor and then it would be sent to the House.

If the House Transportation hears the proposal there is a good chance it will pass.

Sandy Bahr, chapter director of the Sierra Club’s Grand Canyon Chapter, said all of these bills are important because transportation electrification reduces the air, reduces carbon emissions and lessens reliance on oil and gas from other countries as well as reducing the chances for oil spills.
“Many communities suffer from poor air quality and transportation is the biggest contributor to air pollution,” she said. “The more we can electrify cars, trucks and buses, the better off for the air.”

Bahr said using electric vehicles addresses climate concerns.

House Bill 1152 would require a plan to get zero emissions for vehicles. This would require the Arizona Department of Environmental Quality, Arizona Department of Transportation and Arizona Department of Administration to develop coming up with a zero emission program for the state. This is meant to address interstate and intrastate travel in Arizona by having charging stations for electric vehicles where needed.

“This would assure infrastructure for electric vehicles,” she said.

Bahr said the state is likely to get funding for promoting zero emission vehicles. This would mean preparation and coordination among state agencies.

“This would reduce vehicles not polluting into the atmosphere,” she said.

This bill passed out of the Senate and awaits action in the House.

House Bill 1154 would create a study committee on vehicle transportation electrification.

“This is a good idea because there are a lot of opportunities to promote electric vehicles,” she said.

This committee would look at how dollars should be prioritized, the barriers to vehicle electrification and where more charging stations are needed.

Bahr said electric vehicles are more affordable than they used to be, including used electric vehicles.

This bill passed out of the Senate and is waiting to be heard in the House.

Senate Bill 1246 would make the process easier for schools to acquire electric school buses and vehicles.

According to this bill, schools would be able to select preapproved companies that provide electric school buses and charging stations.

This bill passed out of the Senate and has been sent to the House Education Committee. This bill passed the Senate 28-0 with two not voting.

There is no funding included in this bill, but funding from the federal government is expected.

Bahr said diesel buses are bad for kids lungs and overall health. Plus, this would mean less pollution in the air.

“This would promote electric school buses,” she said. “Students shouldn’t be exposed to these exhaust fumes while waiting for their buses.”

Bahr said sometimes change can be slow if the schools use the same vendors, so this will address that by giving them a list of vendors to pick from.

Bahr said these bills promoting electric vehicles will also address climate change issues as cars and trucks put about three trillion pounds of carbon in the air.

“This will improve air quality,” she said. “We have to do more and do more sooner about climate change. These bills will help us do that in Arizona.”

Stan is ex-com at large for the Yavapai Group

Joe Shannon

Saying goodbye to a friend

By Alicyn Gitlin

L ontime Flagstaff-Northern Arizona Group Chair, Joe Shannon, passed away in January, only days after stepping down from the Flagstaff-Northern Arizona Group Executive Committee. Joe remained a fiery and determined advocate until his last days.

Joe’s love of the outdoors started when he was young, as an energetic child, in a large family where nature was his refuge. People who knew Joe well will be surprised to learn that he and his friends loved to wrench on and race dirt bikes. As an adult he turned the same energy to running and riding mountain bikes.

His father cultivated an affinity for water by reading National Geographic magazines with his son. Young Joe wanted to be Jacques Cousteau. He eventually got a Bachelors in Marine Biology from Roger Williams college and soon after began working along the Hudson River. From there on, rivers would become central to his life’s work.

In 1989, Joe was teaching in Scottsdale when he and his partner Emma heard about an opportunity to join a teacher’s river trip in the Grand Canyon. During that trip, Dave Wegner, who at the time worked for Glen Canyon Environmental Studies (GCES), a unit of the Bureau of Reclamation (BOR), hiked a treacherous route to the river, full of excitement about the announcement that an Environmental Impact Statement would be prepared to examine the effects of Glen Canyon Dam. Inspired by the excitement around Colorado River science, Joe changed his career direction and pursued a Masters and PhD at Northern Arizona University, studying how dam-regulated flow patterns impacted the life of the Colorado River and its tributaries.

He went on to work with GCES, which became the Grand Canyon Monitoring and Research Center under the U.S. Geological Survey, after it was determined to be a conflict of interest for BOR to study the impacts of its own dam. Joe eventually became a research professor at NAU, where he focused on the science and policies that shape our rivers.

Joe was known for giving people opportunities. He invited students on his river trips and brought new people into mountain bike riding, as well as road riding and racing. He refused to be constrained by the way things had always been done, by bringing the new field of stable isotopes to aquatic studies in the Grand Canyon and learning to row or motor his own boats during science trips. He worked tirelessly to prioritize forest protection above damaging recreation projects and to fight climate change.

I can’t remember when I first met Joe; he always seemed to be a part of the Grand Canyon community. His NAU graduate seminar on dam management made me realize we could change Glen Canyon Dam’s operations to, at least partially, heal the river ecosystem it had so wrongly harmed.

I feel fortunate to have collaborated for so many years with such an influential mentor. His restless energy inspired many and I hope we can continue to carry on his great work.

CAST OF CHARACTERS: A Warm Welcome To New Members Of Our Team

Ana Gorla: Chapter Program & Communication Assistant

Ana Gorla joined the Sierra Club Grand Canyon Chapter staff team in December as our Program and Communications Assistant. In her role, she helps put together our newsletter and online messages, overseas our social media accounts, supports, and assists with Chapter events, and provides administrative assistance. Ana has already suggested new ways to increase volunteer participation at our events, actions, and activities, and she has a special focus on ways to engage with a more diverse audience. Please help us welcome Ana and thank her for her great work. You can reach her at ana.gorla@sierraclub.org. She welcomes your questions if you want additional information about her.

What are your hobbies or interests?

I go through phases enjoying different hobbies. Right now I love gardening. It feels like a science experiment as I am learning and growing things from seeds while also enjoying nature. It’s very relaxing. I also enjoy thrifting on the weekends, and cooking (plant-based) new foods.

Do you have a favorite place to walk, run, hike, bike, or watch wildlife? If so, where is it and why is it your favorite?

I love biking in Tempe (where I currently live) near Kiwanis Park. It’s so easy to take the canals to Phoenix, Gilbert or Papago park. Biking is such a cool way to see the city. I also like birdwatching. When I travel to national parks and northern Arizona, it takes me out of the human experience and makes me see how many creatures have their own busy lives too.

What made you want to work for Sierra Club?

I have been wanting to dedicate my work skills to something I am very passionate about and I couldn’t think of a better way than to be part of the environmental movement. I love that Sierra Club is making strides to be an inclusive space; where anyone with a passion for the environment can feel safe, are heard, and are included in the Club’s mission. Particularly in Arizona, I am so happy to have found a group of locals that are so dedicated to public lands and strive for a better life for everyone that calls Arizona their home.

What do you like most about your new job?

The community! I don’t think I’ve ever worked at a place where I felt “these are my people”. That’s how I feel here; from local to national.

What are the biggest challenges to this work in Arizona?

Greedy politicians and corporations. It sucks to see communities work so hard on issues and have many people on board just to get stopped by, sometimes, one person.

How can Sierra Club volunteers best support you and your work?

Since I am still new to the space, communication is super helpful for me as I learn and grow with the community here.

What one word do you think describes you best?

Good-natured (pun intended).

Erick Meza: Chapter Borderlands Program Coordinator

Sierra Club’s Grand Canyon Chapter is pleased to welcome Erick Meza to our staff team as the new Borderlands Program Coordinator. Erick began his work with the Chapter at the end of October and hit the ground running by conducting outreach, organizing talks and events, and working to ensure better mitigation of the negative impacts of the border wall and associated infrastructure. We are lucky to have Erick as part of our Sierra Club team. Please help us welcome Erick. You can reach him at erick.meza@sierraclub.org.

And now, learn a little bit more about Erick in his own words.

Tell us a little bit about yourself.

I’m Erick Meza, I was born in the Sonoran Desert of Mexico in a small town called Guaymas on the coast of the Sea of Cortez. I identify as Mestizo with roots in the Sonoran Desert Native people and European colonizers. My family and I migrated to Tucson 7 years ago as we have a strong community here.

What are your hobbies or interests?

I love growing vegetables and anything else you can eat. I also have a big interest in building with natural materials.

Do you have a favorite place to walk, run, hike, bike or watch wildlife? If so, where is it and why is it your favorite?

I love the desert landscape. But if that includes a mountain, canyon, or water feature even better. My happiest place is the Sea of Cortez.

What made you want to work for Sierra Club?

To have the opportunity to learn and work closely with border communities that are going through lots of hardships and face very complex issues.

What do you like most about your new job?

That I get the opportunity to amplify the voices of border communities and hear directly from the most impacted, and advocate for the wildlife that does not have a voice in all the decisions that directly affect them.

What are the biggest challenges to this work in Arizona?

That the environmental issues are surrounded by very strong economic and political interests that intersect in the border region.

How can Sierra Club volunteers best support you and your work?

By getting informed of what is happening. The border is very dynamic and things are constantly changing. Get involved; reach out to us or any other group doing environmental work; help amplify the message and change the negative narrative of the Borderlands.

What one word do you think describes you best?

Creative.
