Paul Watson, Hero or Terrorist?

BY RALPH GINN, Opinion Columnist

Like today's American politics, Paul Watson's biography offers little middle ground. At age 57 he commands his own navy, a fleet of two ocean trawlers. His stated mission is to protect the planet's marine life by harassing illegal drift netters, whalers, longliners and bottom trawlers. His tactics include ramming, fowling propellers with rope, dumping net-rippers (steel I-beams) that destroy nets, scuttling, blocking, and threats. The illusive answer to what is "illegal" provides Watson a quasi haven for what he considers law enforcement on the high seas. Laws that govern international waters are vague and given to multiple interpretations. Paul Watson's view of these laws is quite different than that of many whaling and fishing nations.

Watson was born into a troubled family, with an abusive father, in Toronto, Canada in 1950. He lived with his grandfather for a time and developed a habit of running away for short periods, but at age 17 he road the rails to Vancouver at age 25 Watson had an epiphany during a confrontation with a Russian trawler. A harpooned and dying sperm whale loomed over Paul's small dinghy. He saw a flicker of understanding in the dying whale's eye. Watson believes the whale recognized him as a friend, offering help. The whale heaved its body away from its path toward the dingy and died beneath the waves. That second of recognition between man and whale changed Watson's life. He vowed to become a defender of whales and other creatures of the sea.

In 1946 the world's major whaling nations formed the International Whaling Commission (I.W.C) to manage the ocean's whale fisheries. It did a deplorable job. By the 1970's several whale species were near extinction and by the early eighties the I.W.C. banned commercial whaling. Several of the leading whaling countries declined to abide by the ban. Iceland, Denmark, Norway, and Canada followed the leader, Japan, in ignoring I.W.C.'s moratorium. Watson's Neptune's Navy declared war. Although, whaling for the sake of science has always been an exception to the ban, Japan took whale science to a new level of hypocrisy. In 2005 Japanese whalers killed more than 1000 whales and the government agency that owns their fleet produced no research. The sacrificed whales were all butchered and sold to the supporter and friend, Robert Hunter. Together, the two vessels make up what Watson calls Neptune's Navy.

HERO: At age 25 Watson had an epiphany during a confrontation with a Russian trawler. A harpooned and dying sperm whale loomed over Paul's small dinghy. He saw a flicker of understanding in the dying whale's eye. Watson believes the whale recognized him as a friend, offering help. The whale heaved its body away from its path toward the dingy and died beneath the waves. That second of recognition between man and whale changed Watson's life. He vowed to become a defender of whales and other creatures of the sea.

Watson calls Neptune's Navy. Together, the two vessels make up what Watson calls Neptune's Navy. Watson believes the whale recognized him as a friend, offering help. The whale heaved its body away from its path toward the dingy and died beneath the waves. That second of recognition between man and whale changed Watson's life. He vowed to become a defender of whales and other creatures of the sea.

Watson's view of these laws is quite different than that of many whaling and fishing nations. Watson was born into a troubled family, with an abusive father, in Toronto, Canada in 1950. He lived with his grandfather for a time and developed a habit of running away for short periods, but at age 17 he road the rails to Vancouver. Within a year he joined a Sierra Club protest group against nuclear testing at Amchitka Island. That group evolved into Greenpeace. In 1977 Watson founded his own group, the Sea Shepherd Conservation Society. A year later Sea Shepherd bought it's first boat, a 1956 built Norwegian trawler. Watson named it the Farley Mowat, in honor of the famous Canadian writer and naturalist. Later, Sea Shepherd was able to buy a faster Scottish Fisheries Protection Vessel, which Watson named after his long time...
(Watson, from page 1)

public as meat. I.W.C. officials say that Japan is within their rules. Watson disagrees. He insists the whalers are breaking the law, and deserve ramming. Watson rammed his first ship, the notorious pirate whaler, Sierra, in a Portuguese harbor. He claims to have sunk nine others since.

Watson’s financial supporters include: Patagonia, Paul Mitchell hair products, Pierce Bronson, Sean Penn, William Shatner, Uma Thurman, and Martin Sheen. Sheen says, “Watson is one to the gutsiest guys on the planet.” In 2000 Time Magazine named Watson as one of its Environmental Heroes of the 20th Century. He was a co-founder of Greenpeace, a board member of Sierra Club and a friend of anarchist and writer Edward Abbey (Watson compares his Neptune’s Navy to the characters in Abbey’s book, The Monkey Wrench Gang) and Earth First’s icon David Foreman.

TERRORIST: Paul Watson was expelled from Greenpeace in 1977 over a disagreement in tactics. Specifically, he picked up a sealer’s club and pelts and threw them in the water while protesting the annual seal hunt off the coast of Newfoundland. Greenpeace has a non-violence policy and its board was fearful that Watson’s tactics would inhibit contributions. In 1983 he brought the seal hunt to a standstill by blockading the port of St. John’s, and was later arrested on the seal hunt’s ice field. Watson has spent jail time in both Canada and the Netherlands, and is an admitted misanthrope. He always refers to humans as “Hominids” and once said, “Earthworms are more ecologically important than people. Humans resemble a virus intent on killing its host, the planet.”

In 1986 Sea Shepherd scuttled two ships belonging to Hvalur, Iceland’s largest whaling company, an act of sabotage that some conservationists believe turned Iceland’s public opinion against the cause of saving whales. Watson describes one of his preferred tactics as the Brer Rabbit Ploy. “If you have a moral or political advantage, let the authorities believe that you want to be put on trial.” On several occasions, he has demanded to be charged or even flown to the country that is seeking his arrest. Watson says it works because his adversaries fear that he will use the courts to publicize their own wrongdoing.

GO TO: Paul Watson has written the following books: Sea Shepherd: My Fight for Whales and Seals; Ocean Warrior: My Battle to End the Illegal Slaughter on the High Seas; Seal Wars: Twenty-five Years on the Front Lines With the Harp Seal. David Morris has written a book about Paul Watson: Earth Warrior: Overboard With Paul Watson and the Sea Shepherd Conservation Society. For more information log on: http://www.seashepherd.org. To send a contribution or receive an application to volunteer to serve as a crew member on a Sea Shepherd vessel, go to the same website.
Administrative Review Being Requested for Banner Mine Permit

BY JOYCE BLUMENSHINE

Under Illinois law (62 IL Adm. Code 1847.3), any person who has or may have an adversely affected interest can request an administrative review hearing regarding the approval of a mining permit. Numerous Banner area citizens, members of Heart of Illinois Group Sierra, other individuals, and several organizations, met the 30 day filing requirement to request an Administrative Review of the Banner strip mine permit. Heart of Illinois Sierra sends a sincere thanks and great appreciation to the Illinois Attorney General’s Office, which filed a 31 page document on December 14th. Mayor Ken Fuller, area citizens, and members of HOI will participate in a press conference on January 3rd in Banner to detail issues they listed in requesting the official review of the mining permit. Impact on adjacent Banner Marsh State Fish and Wildlife Area, Rice Lake State Fish and Wildlife Area, and the village of Banner are major concerns, along with water drawdown and the grave potential for water contamination if the strip mine proceeds. Both Banner Marsh and Rice Lake are internationally recognized major migrating bird habitats.

Rock Island Trail Extension Needs Your Letters

BY JOYCE BLUMENSHINE

Please write to your Peoria City Council member and to Mayor Jim Ardis, 419 Fulton St., Peoria, IL 61602, and let him know that you want the City of Peoria to have a hiking-bicycling trail on the Kellar Branch Line from Pioneer Park to Springdale Cemetery. This trail section is the essential link between the 26 miles of the Rock Island Trail to the north, and to the riverfront trail south, which connects to the East Peoria and the Morton bike trails. Be sure to state that you want the City of Peoria to charge full rent for any rail use of the Kellar Branch Line. The city has missed years of revenue by allowing rail companies to have use of the line for $1 per year. The Peoria City Council is not accepting the Peoria Park District data showing that a dual rail-trail is not feasible, and will be considering approving funds for a new study of combined use at their January 8th council meeting. The Peoria Park District has four million dollars in grant funds to build a trail, which are at risk of being lost. These funds cannot be used to build a dual rail-trail, because such a side-by-side trail does not meet the trail construction codes that are part of the Park District grants. For a tour of the complete Kellar Branch Line to see the steep grades, narrow right-of-way, and other issues why a dual rail and trail are not safe or practical, go to http://www.ritrail.org/ and click on “Take a walk on the Kellar Branch.”

Recycling Locations in the Peoria Area

With last year’s closure of the Midland Davis recycling plant in Peoria, you might be wondering where you can take your recyclables. For a complete, up-to-date and downloadable list of recycling locations in the Peoria area, go to the Peoria County website at www.peoriacounty.org/recycle/locations.
