Join us at the Capitol on Monday, December 14th at 6:00 PM. The Sierra Club will host the Commonwealth Clean Energy Forum on Climate Change with Speaker Bill Galvin, Secretary of Energy & Environment. Cathy Buckley, Chair, Massachusetts Sierra Club, will provide compelling testimony at the Forum on clean energy and climate change policies.

Increasingly efficient renewable energy is here, cheaper, cleaner, and more reliable. But the transportation sector, which continues to account for 40% of all emissions, cannot be ignored. Right now we cannot manage what we cannot measure. The tipping point by 2030.

We cannot manage what we cannot measure. To manage the transportation sector, we must include a carbon price in our current climate change policies. We must establish tracking and reporting requirements on transportation fuels and their emissions, but returns the fees back to us.

Tell Governor Baker and House Speaker Robert DeLeo to raise the cap on solar net metering. This will help reduce carbon pollution.

Massachusetts would lead the nation in passing a bill that not only puts a price on carbon and limits the growth of thermal fossil fuels in any form but also raises the cap on solar net metering and removes the cap on solar municipal aggregation.

ACTION: Let your legislator know you support putting a price on carbon and raising the cap on solar net metering.

Thank you for all you do. Much is happening right now, on many fronts.
