The Sierra Peaks Section Peak List identifies 264 mountains located within the range of the Sierra Nevada in California. The List includes 200 peaks, all of which have been climbed by at least one person. The List was first published in 1956 by the Sierra Club and has since been updated several times. The current List includes 175 Peaks (4 from each area), all the Emblem Peaks, and 10 Emblem peaks. Recognition is given to those who climb 175 Peaks in each area, at least 175 of the Sierra Peaks, and at least 300 mountains in the Sierra Nevada. The List also includes 10 Emblem Peaks, which are considered to be the most difficult and challenging peaks in the Sierra Nevada. The List is maintained by the Sierra Club and is available online. The List includes both well-known and lesser-known peaks, providing a challenge for climbers of all levels.
