CHAIRMAN'S CORNER

The Section By-laws state that:

"...members will retain membership for as long as they are members in good standing of the Sierra Club, participate in at least one Section activity per year (such as a climb or service on a committee), and subscribe to the Section newsletter (one subscription is sufficient for related members living at the same address."

(Underlines are mine.) The By-laws further state that "Only members shall have the right to vote."

Now traditionally the Management Committee (i.e. the Secretary) has kept two kinds of members on the books: "active" and "inactive." An "inactive" member is a formerly-active member who renewed his or her subscription to the Echo but who listed no Section "activity" for the previous year. These people are allowed to regain "active" status whenever they list an activity on a subsequent subscription renewal form. (They should not be confused with "Echo subscribers" -- people who are not members but enjoy receiving the Echo.)

Technically, there is no difference between an "inactive member" and an "Echo subscriber" since neither is mentioned in the By-laws, i.e. only "active members" are By-laws "members." Thus by tradition we are doing something not set down explicitly in the By-laws; but there is no problem because only "active" members are sent ballots in October.

The real problem here is defining exactly what constitutes an acceptable "activity." The By-laws gives us only a hint. Traditionally we have accepted the following:

- going on a climb with the Section
- serving as a Section officer or a Section committee chairperson
- writing an article for the Echo or having your photo placed on the cover
- giving a program or serving refreshments at a membership meeting
- performing an outstanding service for the Section
  (e.g. making summit register containers)

Even with all of the above options available, some people list "attendance at the annual banquet" as their only "activity." Thus every year the Management Committee debates whether or not banquet attendance is "acceptable," and every year they seem to decide differently. (Last year: "No." This year: "Yes.")

I think that the issue of "what is an acceptable activity" should be debated and discussed among the membership (informally; e.g. on trips), and that there should be a By-laws amendment this October to settle the question and put a more permanent solution in writing.

Diana Dee
The SPS Peaks List, revised April 1974, is now available. One may be obtained by sending 25 cents (cost!) and a self-addressed stamped envelope to the Secretary, Bill T. Russell.

Your April 1973 list may be updated by making the following revisions:

<table>
<thead>
<tr>
<th>Section</th>
<th>Old Peak</th>
<th>New Peak</th>
<th>New Height</th>
<th>New Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>IV</td>
<td>West Vidette</td>
<td>*East Vidette</td>
<td>12,560</td>
<td>2</td>
</tr>
<tr>
<td>X</td>
<td>Vogelsang Peak</td>
<td>*Cathedral Peak</td>
<td>10,933</td>
<td>2(S-4)</td>
</tr>
<tr>
<td>XII</td>
<td>Round Top</td>
<td>Mokelumne Peak</td>
<td>9,332</td>
<td>2</td>
</tr>
</tbody>
</table>

The first two were proof-reading errors of last year. Mokelumne was added last year, bringing the number of listed peaks to 242.

SPS'ers who are interested in Alpine ski touring (the kind you have to know how to ski to do) can find a large selection of used metal skis at very reasonable prices at Tex's Sporting Goods 910 Wilshire Blvd. Santa Monica

March 1 DWP snow survey indicated 117% of normal snowpack in the Sierra—since then enough new snow has fallen to bring an estimate up to at least 125%. (Unusual to have two above normal years in a row.)

1974 GOLDEN EAGLE, GOLDEN AGE PASSPORTS ARE NOW AVAILABLE

The 1974 Golden Eagle and Golden Age Passports are now available at the 70 National Parks and recreation sites where they provide admission, and at certain other Federal recreation areas. The Golden Eagle Passport is also available at first and second class post offices.

The 1974 Golden Eagle Passport, for persons under 62 years of age, is good for one calendar year. It costs $10 and admits the purchaser and all those accompanying him in a single, private, non-commercial vehicle only to designated entrance fee areas listed below. (A private non-commercial vehicle is any passenger car, station wagon, pickup, camper truck, motorcycle, or other vehicle commonly used for private recreation purposes.) The Golden Eagle Passport does not cover camping or other special recreation use fees; it is nontransferable and nonrefundable. Persons who do not buy a Golden Eagle Passport may pay single-visit entrance fees. One entrance fee will be charged, regardless of the number of days visitors stay within a given area. On the day the entrance fee is paid, visitors may leave and re-enter the area without payment of an additional entrance fee.

Inyo Register, 3/21/74
SAN FERNANDO VALLEY GROUP: JUNE DINNER-SWAP MEET

The SFV Group will hold its annual June Dinner/Swap Meet, Saturday, June 8 from 3:00 pm to 8:00 pm at the Warner Center, Woodland Hills, Catered dinner will include: chicken, lasagna, salads, garlic bread, beverages, desserts, etc. Adults $3.50, kids (under 10) $2.00. Warner Center is the former ranch-house of motion picture magnate Harry Warner. Enjoy swimming in an olympic size heated pool; tennis, or just relax. Dinner will be picnic style (bring your own blanket). Your dinner ticket includes chance for some terrific door prizes!!!

SWAP MEET: Anyone wishing to sell their equipment, such as hiking, climbing, backpacking, camping, fishing, sporting goods, etc., please write (sase) to Dick Ramirez, 10968 Mascarel, Mission Hills, Ca. 91345, stating items/your name/address/phone number. The SFV will solicit 10% donation for each item sold.

For information and/or reservations please contact Chessa Roth 884-7366, Simone DeMiguel 342-7500, Johanna Dekker 785-4986. Closing date for reservations is June 3.

GAS-GAS-GAS

Gasoline is available on Sundays in Sequoia & Kings Canyon Parks, from 10:30 am to 2:30 pm at Lodgepole, and 9:00 am to 5:00 pm at Grant Grove, with an 8 gallon limit. There is food and lodging at Giant Forest and Wilsonia, and a limited selection of groceries and light snacks at Grant Grove.

-Fred Hoeptner

JUNE 20, THURSDAY—AVCO S&L ASSOC.
12229 VENTURA BOULEVARD
STUDIO CITY 8:00 P.M.

Chouinard on Fitzroy, in 16MM sound and picture——Don Lauria "In Person" on Yosemite walls and Sierra spires. Need we say more for a fantastic evening of visual presentation that will blow your mind. Chouinard and Lauria together again for the first time. These two giants are doing their thing on the same evening. Donation $2.50 at door. $2.00 prior by mailing S.A.S.E. to: Beverly Shultz, 3212 Montrose, La Crescenta 91214. Don't get shut out. Space limited!!

PLANS FOR GIANT SKI RESORT TOLD

Squaw Valley

Plans for a $250 million "new Squaw Valley USA" including a European-type pedestrian village, housing, shops, restaurants and sports facilities were announced Wednesday by the Squaw Valley Ski Corp.

Under a new agreement, the corporation will develop mountain ski areas, while Mainline Corp., which owns $1,200 acres of bottom land here, will build a $250 million, year-round resort.

The plans were announced by Alexander C. Cushman, board chairman of the Squaw Valley Ski Corporation, known formerly as the Squaw Valley Development Corp.

MAINLINE, based in Sydney, Australia, plans to develop the valley floor over the next 12 years, Cushman said in a statement.

—Long Beach Press Telegram March 20, 1974
OVERNIGHT CAMPING LIMITED TO WHITNEY

In a plan announced this week, the U.S. Forest Service has set a limit of 75 persons per day for overnight camping along the John Muir Wilderness portion of the Mt. Whitney Trail in the Inyo National Forest.

This limitation will go into effect Memorial Day and will continue through September 30 of this year. This 75 daily entry limit for overnight campers will be on a "first-come, first-served" reservation basis.

Use of the popular 10.7 mile long trail to the summit of 14,495 foot Mt. Whitney, jumped from 12,800 in 1971 to 15,700 in 1973.

No limits have been set on day hiking in and out along the trail. The limit is keyed to overnight campers. Towle noted that Forest Service Wilderness Rangers will be used along the trail to enforce compliance to the quota system.

Wilderness permits, issued free to the public, are required for persons using the Mt. Whitney trail.

Wilderness permits are also valid in National Parks. At Trail Crest Pass, 8 miles up the Mt. Whitney trail, hikers enter Sequoia National Park.

A reservation system has been designed to take advance requests for wilderness permits for individuals and groups desiring to hike the Mt. Whitney trail. Reservations are on a first-come, first-served basis and may be made by telephone, written requests, or a personal visit to the following office: U.S. Forest Service, Mt. Whitney Ranger Station, P.O. Box 8, (South Highway 395), Lone Pine, California 93545, (714) 876-4660.

Written applications should be received by the U.S. Forest Service at least 10 days prior to the trail departure date. Telephone requests will be accepted, dependent upon the number of permits previously issued for that day, up until the day before the planned trailhead departure date. Permits may be available without a previous reservation, however, persons anticipating going to Mt. Whitney are encouraged to make an advance reservation to insure receiving a permit.

Also, there will be a new "Whitney Portal Entrance Station" where permits will be obtained which will be open all night on Fridays and until 10:00 PM Saturday. (open 7:00 AM-10:00 PM Sun. thru Thurs.) Located 1/2 mile west of Lone Pine on the Whitney Portal road.

An Entrance Station with similar hours was opened last year on the Bishop Creek Road about 10 miles west of Bishop, and also one on the Rock Creek road. Opening dates of these are not know (July 1?)

Inyo Register, 3/21/74

COMPANY INVITED

I am planning to climb in Canada this summer, from about the end of June to the end of July. If you are interested in joining me, please call or write:

If YOUR name is listed above, you have NOT renewed your ECHO subscription for 1974 as of 10 April, and unless you do so SOON you will not receive any more ECHOs. If you are an SPS member, please send your name, address, SIERRA CLUB MEMBERSHIP NUMBER, and $2 IMMEDIATELY to George Toby, 1974 SPS Treasurer, 9337 Rubio Ave., Sepulveda, CA 91343. List your Section activity if you wish to maintain active (voting) status. If you are not a member but are an ECHO subscriber, your name, address, and $2 IMMEDIATELY will suffice. If your name appears above but there is a "74" above your name on your mailing label, NEVER FEAR -- we have received your $$. If a FRIEND'S name appears above, please 'bug' him or her to RENEW!

ADVANCE NOTICE

SPS ADVANCED ROCK CLIMB - TAHQUITZ, June 22-23

This climb is not in the new schedule, so don't look for it there. Leader Don Lauria and asst. leader Dick Sykes will teach advanced rock climbing techniques at Tahquitz on Sat.-Sun., June 22-23, 1974. Participation here will be a requirement for the SPS climb of the East Face of Mt. Whitney on August 17-18, also led by Don.

Those who wish to participate should already be reasonably advanced rock climbers, able to lead or follow 4th Class and low to mid 5th Class climbs. You should be able to tolerate exposure and handle climbing gear proficiently.

Reservations are required, as the group size is limited, and must be received by Dennis Lantz no later than June 10 for consideration. Enclose the usual SASE and a recent resume of your applicable skills on rock. Please note what equipment you have and give a frank appraisal of your capability.

JULY 4-7 THURSDAY-SUNDAY SIERRA PEAKS

Siberian Outpost, Boreal Plateau, Pk 12,064, Mt. Langley (14,042'): Meet 7:30 am Saturday at end of Horseshoe Meadow Road for exploratory loop trip over Cottonwood and New Army passes, with some time allowed for fishing. Moderately strenuous with part of terrain cross-country, but suitable for seasoned backpackers in good shape and accustomed to high altitude. Camp two nights at Rocky Basin Lakes and one night in Cottonwood Lakes area. Reservations required (limit 15) as are ice, axe and stove. Leaders: JERRY KEATING and ART DE GOEDE.
ECHOS FROM THE PAST
Ten years ago in the SPS
By Ron Jones

Two training trips were led by the SPS during the period. The first training climb was led by Miles Brubacher. Miles got 55 people up Strawberry and Josephine Peaks in the San Gabriels during a light April snow. Later in April Dick Jali led a training orgy on the Kern Plateau. Dick and some dedicated assistants led approximately 120 people to the summit of Smith Mountain on Saturday, while the following day only 25 climbed Crag Peak! I wonder why the decline in numbers?

New section members who joined this month included Ben Romero, Vern Stiles and Ken McNutt. Ken claimed as his qualifying peaks: Owens, Spanish Needle, Smith Mountain (1 of 120?), Crag, Cartago and Whitney via the switchbacks. I wonder if you're still up to it, Ken? Section membership in the spring of 1964 totaled 132 members including 60 Emblem holders. An interesting Echo article at the time told of a recent (1964) climb of the Northwest face of the Eiffel Tower, a first ascent, by three Frenchmen and an Englishman. Other first ascents listed in the article included an elephant via the steps in 1958 and a first descent by a bicyclist (via the steps) in 1923.

NEW ITEMS FROM THE GIFT SHOP....

FOOTSIES THINGS:

EDDIE BEAN DOWN-FILLED IN-BETWEEN-THE-TOE-WARMERS

Even the famed - Eddie Bean down-filled socks and shoes can't fully protect the spaces between your toes. That's why we developed these highly effective, extremely stylish toe fillers. Come in a finely woven outer shell of water repellent explorer nylon twill made to flexible specifications, and lined with EDDIE BEAN PRIME PREMIUM GOOSE LIVER DOWN. To order, send us a tracing of your foot with exact delineation of your toes. Specify any color, blisters or other aberration. When not in use, your toe warmers can be stored in the convenient belted supra-weave nylon pouch that ties around your ankles. Comes in tan, forest green or scarlet. Average weight, 1 lb. each Set of 10 $24.50

FOR THE INNER YOU:

EDDIE BEAN DOWN-FILLED MT. EVEREST SUPPOSITORY

These are the suppositories that made it to the top of Mount Everest!

When the temperatures get down to 20 degrees or less it seems like the cold "goes right through you." Especially in areas like Mount Everest. That's why we developed a suppository filled with genuine EDDIE BEAN PRIME PREMIUM GOOSE LIVER DOWN.

The suppository breaks down into three or four tiny "fine particles" that get right inside your "bottom" and eventually into your body to keep the "inner you" nice and warm. Icy mountain winds that cut right through you are now absorbed by the goose liver down in your system. Invaluable cold weather insurance. Does not have to be worn. Each suppository weighs only ¼ lb. Outer shell of nylon-goldin comes in tan, forest green or scarlet. Box of 20 $14.95

The only special requirement for this trip was a high misery tolerance. Somehow this and the prospect of a winter ascent lured peak baggers from as far away as Utah to our Oak Creek roadhead.

Our reputation as death marchers at stake, we raced up and down and up several Forks of Oak Creek until finally the participants began dropping like flies.

When we made camp (just before the leaders began dropping) at 9,600' on the North Fork, only half of the 14 had kept on, and of these only five would seek the summit.

The route to camp had involved following the main South Fork trail to a point below a band of cliffs to the north, just beyond where the trail comes close to the creek, at 8500. Thence, one contours to the North Fork, then up to canyon which quickly levels out at 9,500'.

In typically un-SPS fashion, we were off by 8:45 am on Sunday, slogging up a chute almost due north from the final basin below Baxter, then left along the ridge to the summit plateau.

The Sierra in froth made for quite a view, especially of Clarence King—a soaring pinnacle from this lookout. A wind gauge (yep) and thermometer helped us peg the wind chill at -15°F.

By scorning the easy way down we managed to locate a rotten snow and rock passage, enabling us to make use of the rope we had along.

Despite this, the powdery glissades (terrific) helped us back to camp speedily, and after some snowshoeing and a discussion about possible shortcuts we followed Saturday's tracks back to the cars, arriving at dusk. Of second thoughts, I had these: Baxter is probably easier via the trail and ridge from Baxter Pass (witness Tom Ross trip several years ago).

Also, I still believe trips such as these should be relatively open, but leaders should be careful to make sure would-be participants know what real Sierra misery is.

Finally, John McKinley specifically requested me to mention his name in the writeup.

St. Patrick's Day was celebrated by a successful winter climb of Mt. Johnson by all six participants of the weekend outing. Not much green was in evidence as there was four feet of snow on the level at the south end of South Lake and considerably more above.
This particular winter climb was an unqualified success for four specific reasons: (1) Perfect weather with threatening clouds all day Saturday and generally clear skies Sunday; (2) Snow conditions that were almost perfect for snowshoes—very little powder and almost no adhesion of snow to the snowshoes; (3) Signups of four men and one woman who lived up to their advance billings by demonstrating that they were in good physical condition, and finally; (4) a wee bit of advance planning that arranged for a snowmobile to meet us at the end of the plowed road (Bishop Creek Resort/Habeggers) at 7:30 Saturday morning and tow our packs and snowshoes up the road some 4 miles to about 1/4 mile below the South Lake Dam. This procedure was reversed Sunday coming out.

Thus, our climb started at 7:45 A.M. Saturday with a 4-mile stroll up a crispy, snow-covered road without packs or snowshoes. Upon reaching our equipment, we donned snowshoes and followed our planned route directly across South Lake and on up above Treasure Lakes to camp at 4:00 P.M. at a small tarn at 11,400 ft. just below Lake 11,586. Starting at 7:45 A.M. the next morning we snowshoed over Lake 11,586 to a point directly below the eastern slopes of Mt. Johnson. Following a continuous snow field we cramponed all the way to the summit, arriving at 10:30 A.M. After an enchanting half hour scanning the snow mantled Sierra to the limits of the horizon, we started down. The descent was marred by a slight accident in which a slip on the steep snow resulted in a crampon spike puncturing the leg of our only female companion. Fortunately it was not serious and we were back to our pack drop-off point below the dam by 3:00 P.M. One last bit of luck had two additional snowmobilers at Parchers Camp and they graciously ferried us down to the cars, arriving at 4:00 P.M. At five we were eating dinner in Bishop. Gas was in abundance in Bishop and priced equal to Los Angeles.

ALTA PEAK April 13-14 1974 Roy Ward

Fifteen people signed up for this snow trip over Easter weekend. Five had to cancel and four no-shows reduced our number to seven. We all camped at Lodgepole Campground, Friday night for a 0830 meet time on Saturday, and to start the trip off right, Paul Janke lost all his food to a hungry bear but was able to resupply at Giant Forest and make the trip.

We had to wait until the office opened at 0900 Saturday to get a permit as they will only give reservation to get permits by mail now. After picking up the permit the 7 of us met at Woolverton ski area at the Pear Lake trailhead and there Mike McWherter was drafted to act as assistant leader as Cuno had hurt his knee and couldn't make the trip, so off we went on a crusted, packed snow trail. Shortly after the Pear Lake trail branched off we had to don snowshoes as the snow had gotten soft. Bad luck still plagued Paul as he broke one of his plastic snowshoes which we patched with a stick. Slight snowshoe binding problems and one stretch of very steep slopes slowed us down but we reached camp at about 1700.
At 0700 Sunday morning we started up a nice snow chute for a 2,000 foot gain to the summit. Nice crusty snow and slight step kicking and we were all 7 on top at about 0830. Nice clear weather gave us a good view of the Sierras. About an 1800 foot glissade, which wiped out two pair of pants and one water bottle, and at 0940 we were in camp. Packed up and headed out. More slight snowshoe binding problems and one stretch of steep slope (without snowshoes) and then it was downhill all the way. Leather bindings on rented shoes are bad news.

We were back at the cars at 1515. One other slight problem delayed departure till 1630. A lost car key and no spare required hot wiring one car. We had beautiful weather and a good group which made a very enjoyable trip.

PRIVATE CLIMBS

CLYDE MINARET  July 21-22, 1973  Frank Meyers

Doug Dewolf and I had to try twice to get Clyde Minaret. On Saturday we attempted to follow the variation of the Class 3 route that goes below the great south cliffs of Clyde Minaret. This route was found to be blocked by a huge chockstone. Apparently the route used to go underneath but that passage is now blocked by rubble. It looks like a strenuous Class 4 or 5 climb around on the north. The hardest part appears to be getting into the bottomless chimney at the side of the chockstone. One can traverse out from underneath the chockstone but you are 30 to 40 feet up at the apparent crux. The south side is a more severe face climb; it has a multiple sling rappel anchor placed for the 50 to 60 foot drop on descent.

The normal Class 3 route description is also misleading; it appears that from the north end of Amphitheater Lake you go east, joining the blocked route near the notch just south of Clyde Minaret. From there you follow the easy chute north until it suddenly steepens. You can then either continue or (easier) cut back south and cross east to the next chute, which dumps out below over the south cliffs. There is a 10-foot drop on the summit (NW) ridge which should be rated easy Class 4 because of great exposure to the north.

Probably the quickest means of ascent is one of the Class 4 routes on the north side.
This was an "official trip by Explorer Post #528. Approach was from Courtwright Reservoir. We set up a base camp for non-climbers at 8000' on the North Fork of the Kings River. We then set out up Meadow Brook and through Red Mountain Basin, crossing Hell-for-Sure Pass in rain and cloud. The problem with that Pass is that it is worse than it appears to be—the traverse on the east side has much more up and down than shown on the map.

Jack Wolfe, Bill Lipps and I climbed Mt. McGee from Goddard Canyon. To climb McGee via the west peak, go to the lake west of the peak. From the north summit of the west peak, descend (Cl.2) NE until approximately 40 feet from the notch and north of it. Then climb sharply up to the south (Cl.2-3) to cross the main rib running into the notch. Descend south and east over Cl.3-4 rock into the top of the south couloir. Ascend the Cl.2 main peak first below the ridge and later along the ridge. The south couloir is Cl.2 but looks like it may be seasonally difficult. Peter Peak looks like a fine talus walk from the ascent route.

The knapsack route between North Goddard Creek and the river cuts across just below the prominent cliffs facing Goddard Canyon. The correct route is airy (but easy) just above North Goddard Creek and is scantily ducked.

While Doug Dewolfe and I climbed Scylla, Peak 12,410' (1.1 SSE of Mt. Goddard) was climbed by Bill Lipps and Orlo Elfes. They left a register and named it "Headwaters Peak" as it is at the head of the South Fork of the San Joaquin River. Although its ascent is listed in the Mountaineers Guide, they found signs of prior ascent only on the (lower) south summit. That night we had a spectacular camp on the granite slabs of the ridge at the NE base of Mt. Reinstein. Near the base of the peak, water is available in a fine granite tank. Absence of soil requires descent from the crest for toilet facilities. We backpacked out over Mt. Reinstein to return through Blackcap Basin.

On the way in, Maxson Dome was climbed by the Cl. 2 east slopes. It is Class 1 only on the NE, not "from any side" as indicated by the Guide. The south slopes appear Class 3 and the west side probably is Class 4.

LE CONTE PLATEAU Sept. 29-30, 1973 Frank Meyers

Backpacking to the LeConte-Mallory plateau, Bill Lipps and I climbed Mt. Mallory on Saturday. We were amazed to discover we shared the plateau with the Vagmarken, who were doing McAdie, Irvine, Mallory, Le Conte and Corcoran in two days. Ascent to the plateau from big Meysan Lake is via the large chute with the snow tongue or a partially ducked route a little south of that. On Sunday, Bill and I climbed LeConte and Corcoran while Scott Field overcame the altitude to get Mallory. The following route descriptions may clarify a few obscure points of earlier ones:
Mt. LeConte

Route 1: From the LeConte-Mallory plateau, drop down 200 feet in elevation and go up a prominent chute on the west side of LeConte. This chute heads into the summit blocks area of the LeConte summit and is Cl.2 except for one Cl.3-4, 15-ft. pitch about 150 feet up (the "chimney" of Clyde's description; however, some prefer an alternate climb at the left).

Route 2: From the cairn at the base of LeConte, traverse along an easy but exposed ledge for 400 feet to a prominent area of vertical cracks and small ledges (the first break in the smooth face). 200 feet or so of exposed Class 3 up this takes one to the summit area.

Mt. Corcoran (Ed Treacy Route)

From the Mt. LeConte west chute route, go south at the top of the 15-ft. pitch over easy Class 2-3 ledges into the next large chute south. The rest of the route is Cl. 2. Drop down 200 ft. in elevation, thus taking the second possible ridge crossing south. Cross 2 more ridges, descending slightly, and then ascend the right hand chute at the chute junction you have reached. Keep right into a large passage under a high chockstone and hence reach the notch NW of Corcoran. Descend 10 feet on the east side to join the Tuttle Creek (Keating) route. Cross back W in a short, easy chimney and go 200 ft. south to the large chute leading east to the summit.

There is a distinct summit on the ridge between LeConte and Corcoran which is higher than Corcoran Mtn. (13,760+'). As seen from the LeConte Pinnacle (first cairned summit south of the LeConte high point) or from Corcoran, it seems a likely candidate for one of the "false Corcorans" of the past.

"I don't know which looks worse—litter or the litter basket."
